

Stylized Facts on Multinational Firms and Trade in Latin America

Each fact with its original exhibit reproduced on the current base and the variants for the working paper — all goods

1 How to read this document

The document follows the six stylized facts of the July-2026 note (v. 2026-07-29). Each section opens with the fact, reproduces its *original* exhibit on the current base, and then places under it every variant prepared for the working paper: the figures with the foreign-MNE bar split by the multinational’s home country (item 1a); alternative product-sophistication measures for Figure 2, including the Fontagné–Guimbard–Orefice (2022) elasticities, with the full distributions (1b); two-way tables and heat maps of parent country $\times$ destination (1c, 1d); the decomposition of multinationals into foreign vs domestic and of foreign MNEs into present-through-headquarters vs not, in the presence and distance regressions (1e); products at HS6 with descriptions (1f). Revision 6 (2026-09-18) adds the destination side of Fact 3—who carries the exports that reach the United States, China and the EU-27, and which lines US-parent MNEs ship home—and the cross-sector summaries (US-parent share by origin $\times$ sector, home share by parent $\times$ sector, Facts 5 and 6 in one table each). The four sectors are summarised at the end; the sector-by-sector version of every exhibit is the companion document *WP_sectors*, and the country-by-country exhibits are in *WP_countries*. Everything is generated by `stylized_facts/python/wp_*.py` in the project repository (https://github.com/jsvp97/IADB_Orbis_DNB_Customs_Final); the reader’s guide is `docs/WP_RESULTS_2026-09-07.md`.

Conventions (identical to the note). Matched = the firm was found in Orbis or D&B (`_merge_DNB_Orbis=3`); domestic MNE = parent in the exporting country; foreign MNE = matched minus domestic, so matched firms with no recorded parent count as foreign; nine origins (Ecuador excluded); value-weighted; pooled 2006–2022; navy = foreign, light gray = domestic. Wherever the foreign bar is split by home country, the ten largest parent countries (by foreign-MNE export value in the scope) are shown in shades of navy (rank 1 darkest) and every other foreign MNE—including those with no recorded parent—is pooled into “Other foreign MNEs” (gray-blue); domestic MNEs keep the light gray. Two-way country tables show the top-10 parents and destinations; heat maps the top 15. Regressions use plain logs (a zero count drops the cell from that column; no $\ln(1+x)$) and cluster at origin–destination. Sectors: agriculture = HS 01–24; mining & fuels = HS 25–27 and 71; manufacturing = HS 28–97 excluding 71; rest = HS 98–99, chapter 00 and unclassifiable codes (services are not in customs data).

Same data as the note. The regressions that depend only on the matched flag reproduce the note to the last digit: Table 33 returns the note’s Table 1 Panel A coefficients and every observation count (2.0823 / 2.0685 / 0.9414; extensive 1.4622 / 1.4591 / 0.6818; $N = 1,008,472 \dots 1,137,550$) and Table 38 the note’s Table 2 pooled coefficients (−0.1639 / −0.1848; 0.0461 / 0.0458; $N = 5,081,547 / 5,081,360$); Figure 30 gives the note’s 56 % of value for parents with more than 100 affiliates. The cells that use the group’s affiliate links differ in the third decimal only (Table 1 Panel B 1.3536 vs the note’s 1.3522; Table 2 “present” 0.0689 vs 0.0673), because the current base carries the affiliate and parent links of the 2026-04-21 build. The base is therefore the same 5.45 M firm–destination–product–year rows. The field that differs materially is the *parent country*: the current base carries a recorded parent for 92 % of foreign-MNE export value (script 02 and the AI review of unknown parents, merged in the 2026-04-21 build), whereas the note’s Figure 4 was drawn on a copy in which about half of that value had no recorded parent. The parent ranking becomes USA > GBR > CAN > LIE > DEU > NLD (Liechtenstein: foundations owning Argentine and Chilean exporters of copper ore, oil-cake and cereals—a conduit), and the domestic-MNE share rises where the recovered parents are the origin country (COL 0.28 $\rightarrow$ 0.39, CHL 0.02 $\rightarrow$ 0.14), so Fact 1’s “foreign $\gg$ domestic” needs a qualification for Colombia.

Two data limits. (i) “Headquarters exporters” are not identifiable: every matched exporter has a global ultimate owner different from itself (0 of 5.45 M rows), because the match runs through ownership links. What is identifiable is the group’s presence *at the destination* through its headquarters (the affiliate ships to the parent’s country); Facts 5 and 6 decompose foreign MNEs on that. (ii) On the substitution elasticities: Fontagné, Guimbard and Orefice (2022) estimate one import-demand elasticity per HS6 product (rev. 2007), common to all exporters and importers—the elasticity is identified from tariff variation across the universe

of bilateral flows of the product and is a characteristic of the product, not of the origin. Assigning the same $|\sigma|$ to a product whatever its exporting country is therefore the intended use of the database (non-significant or positive HS6 estimates are replaced by the source with the HS4 average and flagged); no origin-specific adjustment is needed or possible. The Rauch (1999) classification (conservative, SITC 3/4 digits mapped to HS6) is added; the Micro-D classification of Bernini, González, Hallak and Vicondoa (2018) is defined on Argentina's 12-digit nomenclature from package-size attributes and cannot be carried to HS6 data for other countries.

2 Fact 1 — Multinational corporations account for a large share of export values across countries

2.1 Original exhibit

Figure 1: Figure 1 of the note, reproduced on the current base: MNE share of export value by origin, foreign vs domestic.

Note: Value-weighted; pooled 2006–2022; nine LAC origins. Bar length = total MNE share; numbers in the appendix.

2.2 Variant: the foreign bar split by the multinational's home country (item 1a)

Figure 2: MNE share of export value by origin, foreign bar split by parent country (top 10, Other foreign, Domestic).

Figure 3: companion heat map: share of each origin's export value by parent-country group (%).

2.3 Variant: the US-parent share of exports by origin and sector (revision 6)

Figure 4: Share of each origin's export value moved by multinationals with a US parent, all goods and by sector.

Note: Share of the cell's export value (all destinations); origins sorted by the all-goods share. Sector versions of Figure 2 are in *WP_sectors*; this figure replaces them for the US-parent question.

Table 1: US-parent MNE share of exports and US-parent export value, by origin and sector

Origin	US-parent MNE share of the origin's exports in the sector (%)				US-parent MNE exports (\$bn/yr)			
	All goods	Agriculture	Mining & fuels	Manufacturing	All goods	Agriculture	Mining & fuels	Manufacturing
CRI	30.3	14.9	2.5	41.9	3.2	0.6	0.0	2.5

SLV	27.9	0.6	39.9	35.4	1.4	0.0	0.1	1.3
DOM	17.0	7.6	4.4	26.3	1.5	0.2	0.1	1.2
COL	11.6	2.5	14.0	11.6	5.1	0.2	3.9	1.0
ARG	8.1	7.2	7.1	9.9	5.4	2.7	0.5	2.2
PER	7.8	2.3	11.0	3.4	3.2	0.2	2.8	0.3
URY	4.9	6.3	0.0	2.8	0.3	0.3	0.0	0.1
CHL	2.6	4.0	0.1	3.1	0.9	0.3	0.0	0.5
All	10.0	8.0	9.9	12.0	23.1	6.7	7.3	9.1

Share of each origin's export value (all destinations) moved by multinationals whose recorded ultimate parent is in the United States, all goods and by sector; origins sorted by the all-goods share. Sectors as in the conventions (rest not shown, included in all goods). Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Figure 5: Exports of the nine origins: share going to the USA, share carried by US-parent MNEs, and both (same denominator: total exports; revision 7).

Figure 6: The same three shares by origin.

Table 2: Exports going to the USA, carried by US-parent MNEs, and both, as shares of total exports: all origins and by origin

Origin	(1) % of exports going to the USA	(2) % of exports carried by US-parent MNEs	(3) % of exports carried by US-parent MNEs and going to the USA	(4) = (3)/(1): US-parent share of the exports going to the USA (%)	Total exports (\$bn/yr)
All	18.4	10.0	2.2	12.1	224.5
SLV	46.1	27.9	18.6	40.2	5.0
CRI	38.3	30.3	14.3	37.2	10.5
DOM	48.0	17.0	11.9	24.7	8.6
COL	31.5	11.6	1.8	5.7	44.0
CHL	13.3	2.6	0.8	6.1	34.2
PER	15.4	7.8	0.7	4.4	41.4
ARG	6.3	8.1	0.3	5.0	66.4
PRY	2.1	30.1	0.1	5.6	7.3
URY	5.5	4.9	0.0	0.3	7.0

Columns (1)–(3) have the same denominator, the origin’s total exports (all firms, all destinations): (1) value shipped to the United States by any firm; (2) value exported by multinationals whose recorded ultimate parent is in the United States, to any destination; (3) the intersection. Column (4) changes the denominator to the exports that go to the United States and is the ratio (3)/(1); it is the US-parent bar of the ‘who carries the exports to the USA’ figure. Origins sorted by column (3). Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin’s pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

3 Fact 2 — Foreign multinationals specialize in complex products, domestic ones in primary goods

3.1 Original exhibits

Figure 7: Figure 2 of the note, reproduced: MNE share of export value by Product Complexity Index quintile.

Note: Value-weighted at HS6; quintiles of the Hausmann–Hidalgo PCI over the scope’s HS6 products (Q1 = least complex).

Figure 8: Figure 3 of the note, reproduced: MNE share of export value by Lall (2000) technology category.

3.2 Variant: split by the multinational's home country (item 1a)

Figure 9: Figure 2 with the foreign bar split by parent country.

Figure 10: Figure 3 with the foreign bar split by parent country.

Figure 11: Figures 2 (Panel A) and 3 (Panel B) with the foreign bar split into OECD-parent and non-OECD-parent multinationals (revision 7).

3.3 Variant: other measures of product sophistication; substitution elasticities (item 1b)

Figure 12: Figure 2 redrawn for six sophistication measures (foreign navy, domestic gray; quintiles over the scope's HS6 products).

Figure 13: Figure 2 with $|\sigma|$ from Fontagné, Guimbard and Orefice (2022) in place of the PCI.

Figure 14: Full distributions: export value across bins of each measure, stacked by owner type, with the foreign-MNE share of each bin (line, right axis).

Figure 15: Distribution over $|\sigma|$ (FGO 2022): export value by owner type and foreign share per bin (left); number of HS6 products per bin (right).

Figure 16: Distribution over the PCI: export value by owner type and foreign share per bin (left); number of HS6 products per bin (right).

Table 3: Foreign and domestic MNE shares by quintile, six sophistication measures

Measure	Foreign MNE share					Domestic MNE share				
	Q1	Q2	Q3	Q4	Q5	Q1	Q2	Q3	Q4	Q5
PCI	0.46	0.44	0.56	0.60	0.65	0.18	0.10	0.13	0.09	0.07
$ \sigma $ FGO (2022)	0.46	0.38	0.45	0.34	0.52	0.06	0.15	0.07	0.40	0.06
σ Broda–Weinstein	0.44	0.40	0.40	0.48	0.39	0.15	0.10	0.06	0.06	0.38
Upstreamness	0.52	0.41	0.41	0.47	0.49	0.06	0.10	0.16	0.09	0.21
Quality ladder	0.49	0.49	0.65	0.64	0.43	0.08	0.08	0.07	0.07	0.16
RHCI	0.34	0.59	0.51	0.49	0.53	0.25	0.06	0.06	0.12	0.11

Value-weighted shares of export value within quintile; quintiles over HS6 products (unweighted); ‘–’ = fewer than 30 HS6 products carry the measure in this scope. $|\sigma|$ FGO: absolute value of the tariff-based import-demand elasticity of Fontagné, Guimbard and Orefice (2022), HS6 rev. 2007 (non-significant or positive HS6 estimates replaced by the HS4 average by the source); larger = more substitutable. σ Broda–Weinstein, upstreamness (Antràs–Chor), quality ladder (Khandelwal), RHCI (UNCTAD) as in the document’s appendix.

Table 4: Correlations across sophistication measures (HS6, value-weighted)

	PCI	$ \sigma $ FGO (2022)	σ Broda–Weinstein	Upstreamness	Quality ladder	RHCI
PCI	1.00	-0.22	-0.49	-0.49	0.28	0.74
$ \sigma $ FGO (2022)	-0.22	1.00	0.03	0.62	0.12	0.02
σ Broda–Weinstein	-0.49	0.03	1.00	0.20	-0.11	-0.25
Upstreamness	-0.49	0.62	0.20	1.00	0.12	-0.19
Quality ladder	0.28	0.12	-0.11	0.12	1.00	0.34
RHCI	0.74	0.02	-0.25	-0.19	0.34	1.00

Value-weighted Pearson correlations, pairwise: each cell uses the HS6 products carrying both measures (3,124 to 4,841 products; ‘–’ = fewer than 30).

Table 5: MNE shares by Rauch (1999) class

Rauch (1999) class	Foreign	Domestic	MNE total	N HS6	Value (\$bn/yr)
Differentiated	0.563	0.058	0.621	2,712	44.3
Reference-priced	0.549	0.082	0.631	1,636	63.7
Homogeneous (exchange)	0.343	0.228	0.571	319	97.6

Dollar values are annual averages: each origin’s pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Table 6: MNE shares by Rauch (1999) class, two classes: differentiated vs non-differentiated (reference-priced + homogeneous)

Rauch (1999): differentiated vs non-differentiated	Foreign	Domestic	MNE total	N HS6	Value (\$bn/yr)
Differentiated	0.563	0.058	0.621	2,712	44.3
Non-differentiated	0.426	0.169	0.595	1,955	161.4

Dollar values are annual averages: each origin’s pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

**Figure 17:** Foreign vs domestic MNE shares of export value: differentiated vs non-differentiated products (Rauch 1999; non-differentiated = reference-priced + homogeneous).

Table 7: MNE shares by BEC end use

BEC end use	Foreign	Domestic	MNE total	N HS6	Value (\$bn/yr)
Intermediate	0.476	0.155	0.631	3,090	155.0
Consumption	0.438	0.082	0.520	1,201	46.1
Capital	0.647	0.056	0.703	659	9.3

BEC Rev. 4 end use in three classes: intermediate = industrial supplies, fuels (incl. motor spirit and goods n.e.s., which are fuels in these data), parts and food for industry; consumption = food for households, passenger cars and consumer goods; capital = capital goods and industrial transport equipment. HS6 lines without a BEC correspondence are excluded. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Table 8: Note's Table A.4 ladder with the FGO elasticity added (ODPY cells, MNE value share)

Observations	1,671,802	1,670,186	1,788,929	1,787,370	1,667,472	1,665,924
Origin × year and destination × year FE	✓		✓		✓	
Origin × dest. × year FE		✓		✓		✓

One observation = origin *imes* destination *imes* HS6 product *imes* year; dep. var. MNE share of the export value of the product from the origin to the destination in the year; each measure entered in its own regression; weighted by that export value; robust (HC1) SE. PCI = Hausmann–Hidalgo Product Complexity Index (continuous); Lall (2000) in the four categories of Figure 3, base = primary and resource-based; Rauch (1999) in three classes, base = homogeneous (exchange-traded). Cells whose HS6 line lacks the measure are dropped from that column. *** p<0.01, ** p<0.05, * p<0.1

4 Fact 3 — Multinational corporations from a small set of countries dominate exports

4.1 Original exhibit

Figure 18: Figure 4 of the note, reproduced on the current base: foreign-MNE export value by parent country, top 15 plus Other.

Note: Foreign MNEs with a recorded parent country.

Table 10: Foreign-MNE export value by parent country (numbers behind the figure)

Parent country	Share (%)	Value (\$bn/yr)
USA	23.3	23.1
GBR	19.3	16.7
CAN	7.8	7.4
LIE	5.4	4.9
DEU	4.3	4.6
NLD	3.9	4.4
CHE	3.6	3.9
JPN	3.4	3.5
PAN	3.3	3.0
BRA	2.8	3.0
ESP	2.6	2.8
FRA	2.5	2.5
CHL	1.4	1.4
ZAF	1.1	1.0
AUS	1.1	1.1
Other (150 countries)	14.1	14.2
Foreign MNEs with recorded parent	100.0	97.6
Foreign MNEs, parent unknown (excluded above)	—	7.8

Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Figure 19: The same ranking with total exports as the denominator: share of total export value by parent country, other foreign MNEs and domestic MNEs (revision 8).

Table 11: Share of total export value by parent country (numbers behind the figure)

Exporter type / parent country	Share of total exports (%)
USA	10.0
GBR	8.3
CAN	3.4
LIE	2.3
DEU	1.8
NLD	1.7
CHE	1.5
JPN	1.5
PAN	1.4
BRA	1.2
ESP	1.1
FRA	1.1
CHL	0.6
ZAF	0.5
AUS	0.5
Other foreign MNEs (incl. unknown parent)	9.5
Domestic MNEs	14.1
All MNEs	60.5
Local firms (unmatched)	39.5

Denominator: the scope's total export value, all firms and destinations (the same denominator as Figure 1 and as the US three-share exhibit). Foreign MNEs with a recorded parent are shown for the 15 largest parent countries; every other foreign MNE, including matched firms with no recorded parent, is pooled.

4.2 Variant: parent country × export destination — tables (item 1c)

Table 12: Parent region × destination region, export value (USD bn)

Parent region / Destination region	Latin America	North America	Europe	Asia	Africa	Oceania	Rest of World	Total
Latin America	4.8	1.8	1.7	3.1	0.2	0.1	0.0	11.6

Panel B	BMU	0.0	0.7
Panel B	SGP	0.0	0.5
Panel B	VGB	0.0	0.3
Panel B	BHS	0.0	0.2

Panel A: parents that are not tax havens, with dependencies and overseas territories folded into their sovereign (HKG→CHN, MAC→CHN, MCO→FRA, AIA→GBR, BMU→GBR, CYM→GBR, FLK→GBR, GGY→GBR, GIB→GBR, IMN→GBR, JEY→GBR, MSR→GBR, SHN→GBR, TCA→GBR, VGB→GBR, ABW→NLD, ANT→NLD, BES→NLD, CUW→NLD, SXM→NLD, ASM→USA, GUM→USA, PRI→USA, VIR→USA). Panel B: the tax-haven and conduit jurisdictions as recorded (AND, ARE, BHS, BLZ, BRB, CHE, CYP, IRL, LBR, LIE, LUX, MHL, MLT, MUS, PAN, SGP, SMR, SYC, VUT, WSM and the dependencies above), each with its own home share. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Figure 26: Share of each parent's export value shipped to the parent's own country: all goods and the three sectors, top-10 parents.

Note: Hatched bars: the parent exports less than \$1bn in the sector, so the share is fragile; the parent's exports in each scope are in parentheses.

Table 23: Home share by parent, all goods and by sector (numbers behind the figure)

Parent	% of the parent's LAC exports shipped to the parent's own country				Parent's LAC exports (\$bn/yr)			
	All goods	Agriculture	Mining & fuels	Manufacturing	All goods	Agriculture	Mining & fuels	Manufacturing
USA	22.3	7.3	12.5	40.5	23.1	6.7	7.3	9.1
GBR	0.6	1.6	0.6	0.3	16.7	0.7	11.9	4.2
CAN	19.5	1.2	26.1	0.7	7.4	0.4	5.7	1.3
LIE	0.0	0.0	0.0	0.0	4.9	2.2	2.0	0.7

PAN	1.4	3.5	0.4	1.3	3.0	0.6	1.0	1.3
BRA	18.6	4.9	33.8	21.9	3.0	1.1	0.7	1.3
All known-parent foreign MNEs	9.1	5.4	7.9	12.8	97.6	27.2	34.5	35.7

Top-10 parent countries by foreign-MNE export value (all goods). Home share = value the parent's affiliates export from the nine origins to the parent's country, over everything they export from the nine origins, all goods and within each sector. Shares computed on less than \$1bn of pooled exports are fragile (hatched in the figure). Pooled 2006–2022; foreign MNEs with a recorded parent country. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

4.4 Variant: seen from the destination — who carries the exports that reach each market (revision 6)

The exhibits above ask where each parent ships. These turn the question around: of the value that reaches a destination, how much is moved by multinationals whose parent sits in that destination, by US-parent MNEs, by other foreign MNEs, by domestic MNEs and by local (unmatched) firms.

Figure 27: Exports to the United States by origin: share moved by US-parent MNEs, other foreign MNEs, domestic MNEs and local firms — all goods (left) and manufacturing (right).

Note: Origins sorted by the all-goods US-parent share; right margin = the origin's exports to the USA in the scope.

Table 24: Exports to the United States by sector: who carries them (%)

Sector	Exports to the USA (\$bn/yr)	US-parent MNEs (%)	Other foreign MNEs (%)	Domestic MNEs (%)	Local firms (%)
All goods	40.0	12.1	23.1	24.4	40.4
Agriculture	10.7	3.9	28.9	9.2	58.0
Mining & fuels	14.6	6.1	15.3	52.0	26.6
Manufacturing	14.5	24.6	26.6	6.7	42.1
Rest	0.1	24.5	53.9	4.5	17.1

Exports from the nine origins to the United States by sector, and the share of that value moved by each type of exporter. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Table 25: Exports to the United States by origin, all goods: who carries them (numbers behind the left panel)

Origin	Exports to the USA (\$bn/yr)	US-parent MNEs (%)	Other foreign MNEs (%)	Domestic MNEs (%)	Local firms (%)
SLV	2.3	40.2	8.7	0.0	51.1

CAN	6.0	25.9	1.9	5.2	–	16.5	6.9	43.5
KOR	5.0	0.1	8.5	2.4	2.5	39.2	7.7	39.5

All goods. The 8 largest destination markets (EU-27 = the 27 member states, pooled; the United Kingdom is not included) and the share of the value reaching each one moved by each type of exporter. ‘Parent in the destination’: the exporter’s ultimate parent is in the destination country (for the EU-27, in any member state); the US-, EU-27- and CAN-parent columns count those parents when the destination is not their home (blank on their own row, where they are the ‘parent in the destination’). Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin’s pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Top 15 HS6 lines by the value the nine origins export to the United States, and the share of each line moved by each type of exporter. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

5 Fact 4 — A small set of large multinational groups accounts for the bulk of exports

5.1 Original exhibits

Figure 30: Figure 5 of the note, reproduced: foreign-MNE export value and parent counts by global affiliate-network size.

Table 29: Numbers behind Figure 5

Global affiliate count	Parents	Share of parents (%)	Share of foreign-MNE export value (%)
1	5,982	48.4	5.4
2–10	3,397	27.5	12.4
11–100	1,893	15.3	26.2
>100	1,099	8.9	56.0
All parents with a network record	12,371	100	100

Foreign-MNE parents (parent name key) exporting from the nine origins; 98% of parents and 97% of foreign-MNE export value have a matched global-network record (Orbis $\cup$ D&B roster, src/16). Network size = number of distinct worldwide affiliates.

Figure 31: Figure 6 of the note, reproduced: product-level export concentration, naive firm count vs grouping affiliates by parent.

Table 30: Numbers behind Figure 6: HHI, top-exporter share, effective number of exporters

Sample	Measure	Naive	Within country	Across countries
<i>All products: 5,929 HS6, 100% of value</i>				
	Mean HHI	0.192	0.209	0.215
	Mean top-exporter share	31.0%	32.5%	33.7%
	Effective number of exporters (1/HHI)	12.5	11.7	10.4
<i>MNE-intensive products (MNE $\geq$ 50% of exports): 1,887 HS6, 53% of value</i>				
	Mean HHI	0.234	0.262	0.270
	Mean top-exporter share	36.0%	38.7%	39.8%
	Effective number of exporters (1/HHI)	8.9	8.0	7.4

Value-weighted means across HS6 products (nine origins, Ecuador excluded). Naive: each exporting affiliate (Tax ID) is a firm; then affiliates of the same global parent are grouped within a country and across countries.

5.2 Variant: groups versus affiliates inside the market cells (item 1e, “MNE cantidad”)

Table 31: Affiliates per group in the origin–destination–product–year cells

Origin-destination-product-year cells with ≥ 1 MNE	
Cells	1,008,755
MNE affiliates per cell (mean)	1.91
MNE groups per cell (mean)	1.90
Affiliates per group, pooled	1.01
Affiliates per group, value-weighted mean	1.08
Cells where one group exports through > 1 affiliate (%)	1.0

Group = ultimate parent (Orbis GUO id or D&B global ultimate; parent name when the id is missing).

Table 32: Fact-5 regressions with $\ln(\# \text{ MNE groups})$ in place of $\ln(\# \text{ MNE firms})$

6.2 Variant: foreign vs domestic MNEs; foreign MNEs present through headquarters vs not (item 1e)

Table 34: MNE export value by origin: domestic share, and foreign-MNE value by the group's presence at the destination

Origin	MNE value (\$bn/yr)	of which domestic (%)	Foreign-MNE value (\$bn/yr)	% of foreign-MNE value: group present at destination	
				through headquarters	not through HQ (of which via another affiliate)
ARG	37.5	13.3	32.5	6.5	93.5 (41.8)
CHL	21.0	22.1	16.4	4.3	95.7 (56.7)
COL	32.8	52.5	15.5	6.5	93.5 (34.2)
CRI	6.6	5.7	6.3	25.5	74.5 (33.8)
DOM	6.0	1.8	5.9	29.0	71.0 (21.6)
PER	19.3	5.0	18.3	3.9	96.1 (28.8)
PRY	4.5	1.8	4.4	2.1	97.9 (65.5)
SLV	2.4	0.6	2.4	40.7	59.3 (28.1)
URY	4.4	15.9	3.7	5.2	94.8 (37.7)
All	134.5	23.4	105.4	8.4	91.6 (40.5)

'Through headquarters': the affiliate ships to its parent's country. 'Not through HQ': every other destination; in parentheses the part where the group has another affiliate in the destination (Orbis/D&B roster). Pooled 2006–2022. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Top 30 HS6 products by foreign-MNE export value (60% of foreign-MNE exports). For./Dom./Local = foreign-MNE, domestic-MNE and local-firm shares of the product's export value, percent (pooled 2006–2022, nine LAC origins). Foreign = matched firms whose parent is abroad or unknown; Domestic = parent in the exporting country; Local = unmatched. Lead parent = largest parent country among the product's foreign MNEs and its share of the product's foreign-MNE value. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Table 44: HS6 products ($\geq$ \$500m) with the highest foreign-MNE share

HS6	Description	\$bn/yr	For.	Dom.	Local	Lead parent

HS6 products with export value $\geq$ \$500m ranked by the domestic-MNE share. For./Dom./Local = foreign-MNE, domestic-MNE and local-firm shares of the product's export value, percent (pooled 2006–2022, nine LAC origins). Foreign = matched firms whose parent is abroad or unknown; Domestic = parent in the exporting country; Local = unmatched. Lead parent = largest parent country among the product's foreign MNEs and its share of the product's foreign-MNE value. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Table 46: Distribution of the HS6 foreign share, numbers

Foreign share bin (%)	Share of value	MNE share of exporting firms	N HS6
0–10	0.048	0.250	1,426
10–20	0.054	0.285	731
20–30	0.189	0.329	652
30–40	0.202	0.372	591
40–50	0.127	0.411	519
50–60	0.059	0.433	442
60–70	0.070	0.435	386
70–80	0.074	0.470	311
80–90	0.129	0.479	311
90–100	0.048	0.530	560

MNE share of exporting firms = matched firm-cells (firm x destination x HS6 x year) over all firm-cells in the bin's products.

9 The four sectors at a glance (item 2)

Sector definitions in the conventions above. The full set of exhibits within each sector is in the companion document *WP_sectors*.

Table 47: The four sectors: total and MNE exports, shares, leading parents

Sector	Total exports (\$bn/yr)	MNE exports (\$bn/yr)	Foreign (%)	Domestic (%)	Leading parents (share of foreign)
Agriculture	78.9	37.8	38.1	9.5	USA 0.24, CHE 0.11, NLD 0.10
Mining & fuels	72.4	52.4	49.2	24.5	GBR 0.36, USA 0.21, CAN 0.16
Manufacturing	72.7	43.9	51.6	8.0	USA 0.25, GBR 0.14, DEU 0.09
Rest	0.5	0.4	47.9	28.0	USA 0.39, GBR 0.12, ESP 0.11
All	224.5	134.5	46.3	14.1	

Agriculture = HS 01–24; Mining & fuels = HS 25–27 and 71 (precious metals and stones); Manufacturing = HS 28–97 (excl. 71); Rest = HS 98–99, chapter 00 and unclassifiable codes. Services are not observable in customs merchandise data. Pooled 2006–2022, nine LAC origins. Foreign / Domestic = share of the row's export value; leading parents = the three largest parent countries among the row's foreign MNEs with their share of the row's foreign-MNE value. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

**Figure 36:** Foreign and domestic MNE shares by sector.

Figure 37: Foreign-MNE share by origin and sector (%).

Table 48: Composition (Panel A) and foreign-MNE share (Panel B) by origin and sector

Origin	Agriculture	Mining & fuels	Manufacturing	Rest	All
<i>Panel A: composition of the origin's exports in the scope, % (rows sum to 100)</i>					
ARG	57.4	9.9	32.7	0.0	100.0
CHL	21.9	29.7	46.9	1.4	100.0
COL	16.3	63.4	20.3	0.0	100.0
CRI	41.5	1.0	57.5	0.0	100.0
DOM	23.1	22.8	54.1	0.0	100.0
PER	19.4	61.0	19.6	0.0	100.0
PRY	85.2	1.1	13.7	0.0	100.0
SLV	22.1	3.0	74.9	0.0	100.0
URY	63.0	2.4	34.6	0.0	100.0
All origins	32.9	33.9	32.9	0.3	100.0
<i>Panel B: foreign-MNE share of export value within the cell, %</i>					
ARG	37.8	75.1	60.4	—	48.9
CHL	29.6	73.9	39.9	48.6	47.9
COL	28.0	30.1	57.8	12.7	35.3
CRI	44.5	46.9	70.9	100.0	59.7
DOM	40.7	85.3	73.2	—	68.4
PER	33.0	52.2	30.6	78.0	44.2
PRY	65.0	44.1	37.9	—	61.1
SLV	28.9	58.8	52.5	1.5	47.4
URY	51.8	42.9	55.3	—	52.8
All origins	38.1	49.2	51.6	47.9	46.3

Pooled 2006–2022. Panel A: share of each sub-sector in the origin's exports within the scope (rows sum to 100). Panel B: foreign-MNE share of export value in each origin × sub-sector cell ('—' = no exports); 'All' = the origin's overall foreign-MNE share in the scope.

Table 49: Foreign-MNE exports: destination region by sector (row %)

Sector / Destination region	Latin America	North America	Europe	Asia	Africa	Oceania	Rest of World	Total
Agriculture	31.1	13.8	20.2	28.1	6.1	0.4	0.4	30.7
Mining & fuels	14.3	14.6	24.7	45.5	0.5	0.2	0.2	36.0
Manufacturing	50.8	20.7	9.3	17.3	0.7	1.1	0.2	38.5
Rest	37.3	42.2	17.2	2.9	0.1	0.2	0.1	0.2

Foreign-MNE exports: destination mix of each sector, row percentages; last column = row total, USD bn per year. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Table 50: Memo: service-sector affiliates among matched exporters (NAICS of the affiliate)

NAICS sector of the matched exporting affiliate	% of matched export value
goods-producing or unknown	82.4
information, finance, professional, holdings (51–56)	7.7
wholesale / retail trade (42–45)	7.4
other services (61–92)	1.8
transport, logistics (48–49)	0.6

Memo. Customs data record goods; 'services' can only be approached through the affiliate's own industry code. Matched exporters whose NAICS is a trade, logistics, finance or holding code export goods produced elsewhere in the group or bought from local suppliers.

A Numbers behind the figures

A.1 All goods

Table 51: Figure 1 numbers (foreign, domestic, total)

Origin	Foreign	Domestic	MNE total	Value (\$bn/yr)
COL	0.353	0.391	0.744	44.0
DOM	0.684	0.013	0.697	8.6
CRI	0.597	0.036	0.633	10.5
URY	0.528	0.100	0.628	7.0
PRY	0.611	0.011	0.622	7.3
CHL	0.479	0.136	0.615	34.2
ARG	0.489	0.075	0.564	66.4

Figure 1 split by parent country. Value-weighted; pooled 2006–2022; nine LAC origins (Ecuador excluded). The foreign-MNE bar is split into the 10 largest parent countries by foreign-MNE export value in the scope and ‘Other foreign’ (all remaining parents, including matched firms with no recorded parent country); domestic MNEs have a parent in the exporting country. Dollar values are annual averages: each origin’s pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.
