

Stylized Facts on Multinational Firms and Trade in Latin America

Each fact with its original exhibit reproduced on the current base and the variants for the working paper — all goods

1 How to read this document

The document follows the six stylized facts of the July-2026 note (v. 2026-07-29). Each section opens with the fact, reproduces its *original* exhibit on the current base, and then places under it every variant prepared for the working paper: the figures with the foreign-MNE bar split by the multinational's home country (item 1a); alternative product-sophistication measures for Figure 2, including the Fontagné–Guimbard–Orefice (2022) elasticities, with the full distributions (1b); two-way tables and heat maps of parent country $\times$ destination (1c, 1d); the decomposition of multinationals into foreign vs domestic and of foreign MNEs into present-through-headquarters vs not, in the presence and distance regressions (1e); products at HS6 with descriptions (1f). The four sectors are summarised at the end; the sector-by-sector version of every exhibit is the companion document *WP_sectors*, and the country-by-country exhibits are in *WP_countries*. Everything is generated by *stylized_facts/python/wp_*.py* in the project repository (github.com/jsvp97/IADB_Orbis_DNB_Customs_Final); the reader's guide is *docs/WP_RESULTS_2026-09-07.md*.

Conventions (identical to the note). Matched = the firm was found in Orbis or D&B (`_merge_DNB_Orbis=3`); domestic MNE = parent in the exporting country; foreign MNE = matched minus domestic, so matched firms with no recorded parent count as foreign; nine origins (Ecuador excluded); value-weighted; pooled 2006–2022; navy = foreign, light gray = domestic. Wherever the foreign bar is split by home country, the ten largest parent countries (by foreign-MNE export value in the scope) are shown in shades of navy (rank 1 darkest) and every other foreign MNE—including those with no recorded parent—is pooled into “Other foreign MNEs” (gray-blue); domestic MNEs keep the light gray. Two-way country tables show the top-10 parents and destinations; heat maps the top 15. Regressions use plain logs (a zero count drops the cell from that column; no $\ln(1+x)$) and cluster at origin–destination. Sectors: agriculture = HS 01–24; mining & fuels = HS 25–27 and 71; manufacturing = HS 28–97 excluding 71; rest = HS 98–99, chapter 00 and unclassifiable codes (services are not in customs data).

Same data as the note. The regressions that do not depend on the parent country reproduce the note to the last digit: Table 19 returns the note's Table 1 coefficients and observation counts (2.0823 / 2.0685 / 0.9414; extensive 1.4622 / 1.4591 / 0.6818; Panel B 1.3522 / 1.3393 / 0.2391 and 1.4129 / 1.3958 / 0.1306) and Table 23 the note's Table 2 pooled coefficients (–0.1639 / –0.1848; 0.0461 / 0.0458); Figure 18 gives the note's 56 % of value for parents with more than 100 affiliates. The base is therefore the same 5.45 M firm–destination–product–year rows. The one field that differs is the *parent country*: the current base carries a recorded parent for 92 % of foreign-MNE export value (script 02 and the AI review of unknown parents, merged in the 2026-04-21 build), whereas the note's Figure 4 was drawn on a copy in which about half of that value had no recorded parent. The parent ranking becomes USA > GBR > CAN > LIE > DEU > NLD (Liechtenstein: foundations owning Argentine and Chilean exporters of copper ore, oil-cake and cereals—a conduit), and the domestic-MNE share rises where the recovered parents are the origin country (COL 0.28 → 0.39, CHL 0.02 → 0.14), so Fact 1's “foreign $\gg$ domestic” needs a qualification for Colombia.

Two data limits. (i) “Headquarters exporters” are not identifiable: every matched exporter has a global ultimate owner different from itself (0 of 5.45 M rows), because the match runs through ownership links. What is identifiable is the group's presence *at the destination* through its headquarters (the affiliate ships to the parent's country); Facts 5 and 6 decompose foreign MNEs on that. (ii) On the substitution elasticities: Fontagné, Guimbard and Orefice (2022) estimate one import-demand elasticity per HS6 product (rev. 2007), common to all exporters and importers—the elasticity is identified from tariff variation across the universe of bilateral flows of the product and is a characteristic of the product, not of the origin. Assigning the same $|\sigma|$ to a product whatever its exporting country is therefore the intended use of the database (non-significant or positive HS6 estimates are replaced by the source with the HS4 average and flagged); no origin-specific adjustment is needed or possible. The Rauch (1999) classification (conservative, SITC 3/4 digits mapped to HS6) is added; the Micro-D classification of Bernini, González, Hallak and Viccondoa (2018) is defined on Argentina's 12-digit nomenclature from package-size attributes and cannot be carried to HS6 data for other

countries.

2 Fact 1 — Multinational corporations account for a large share of export values across countries

2.1 Original exhibit

Figure 1: Figure 1 of the note, reproduced on the current base: MNE share of export value by origin, foreign vs domestic.

Note: Value-weighted; pooled 2006–2022; nine LAC origins. Bar length = total MNE share; numbers in the appendix.

2.2 Variant: the foreign bar split by the multinational's home country (item 1a)

Figure 2: MNE share of export value by origin, foreign bar split by parent country (top 10, Other foreign, Domestic).

Figure 3: companion heat map: share of each origin's export value by parent-country group (%).

3 Fact 2 — Foreign multinationals specialize in complex products, domestic ones in primary goods

3.1 Original exhibits

Figure 4: Figure 2 of the note, reproduced: MNE share of export value by Product Complexity Index quintile.
Note: Value-weighted at HS6; quintiles of the Hausmann–Hidalgo PCI over the scope’s HS6 products (Q1 = least complex).

Figure 5: Figure 3 of the note, reproduced: MNE share of export value by Lall (2000) technology category.

3.2 Variant: split by the multinational's home country (item 1a)

Figure 6: Figure 2 with the foreign bar split by parent country.

Figure 7: Figure 3 with the foreign bar split by parent country.

3.3 Variant: other measures of product sophistication; substitution elasticities (item 1b)

Figure 8: Figure 2 redrawn for six sophistication measures (foreign navy, domestic gray; quintiles over the scope's HS6 products).

Figure 9: Figure 2 with $|\sigma|$ from Fontagné, Guimbard and Orefice (2022) in place of the PCI.

Figure 10: Full distributions: export value across bins of each measure, stacked by owner type, with the foreign-MNE share of each bin (line, right axis).

Figure 11: Distribution over $|\sigma|$ (FGO 2022): export value by owner type and foreign share per bin (left); number of HS6 products per bin (right).

Figure 12: Distribution over the PCI: export value by owner type and foreign share per bin (left); number of HS6 products per bin (right).

Table 1: Foreign and domestic MNE shares by quintile, six sophistication measures

Measure	Foreign MNE share					Domestic MNE share				
	Q1	Q2	Q3	Q4	Q5	Q1	Q2	Q3	Q4	Q5
PCI	0.46	0.44	0.56	0.60	0.65	0.18	0.10	0.13	0.09	0.07
$ \sigma $ FGO (2022)	0.46	0.38	0.45	0.34	0.52	0.06	0.15	0.07	0.40	0.06
σ Broda–Weinstein	0.44	0.40	0.40	0.48	0.39	0.15	0.10	0.06	0.06	0.38
Upstreamness	0.52	0.41	0.41	0.47	0.49	0.06	0.10	0.16	0.09	0.21
Quality ladder	0.49	0.49	0.65	0.64	0.43	0.08	0.08	0.07	0.07	0.16
RHCI	0.34	0.59	0.51	0.49	0.53	0.25	0.06	0.06	0.12	0.11

Value-weighted shares of export value within quintile; quintiles over HS6 products (unweighted). $|\sigma|$ FGO: absolute value of the tariff-based import-demand elasticity of Fontagné, Guimbard and Orefice (2022), HS6 rev. 2007 (non-significant or positive HS6 estimates replaced by the HS4 average by the source); larger = more substitutable. σ Broda–Weinstein, upstreamness (Antràs–Chor), quality ladder (Khandelwal), RHCI (UNCTAD) as in the document's appendix.

Table 2: Correlations across sophistication measures (HS6, value-weighted)

	PCI	$ \sigma $ FGO (2022)	σ Broda–Weinstein	Upstreamness	Quality ladder	RHCI
PCI	1.00	0.08	0.04	-0.06	0.38	0.74
$ \sigma $ FGO (2022)	0.08	1.00	0.09	0.30	0.13	0.21
σ Broda–Weinstein	0.04	0.09	1.00	-0.17	-0.16	0.09
Upstreamness	-0.06	0.30	-0.17	1.00	0.21	0.18
Quality ladder	0.38	0.13	-0.16	0.21	1.00	0.36
RHCI	0.74	0.21	0.09	0.18	0.36	1.00

Value-weighted Pearson correlations across 2,809 HS6 products with all six measures.

Table 3: MNE shares by Rauch (1999) class

Rauch (1999) class	Foreign	Domestic	MNE total	N HS6	Value (\$bn)
Differentiated	0.563	0.058	0.621	2,712	450.4
Reference-priced	0.549	0.082	0.631	1,636	698.5
Homogeneous (exchange)	0.343	0.228	0.571	319	1,030.0

Table 4: MNE shares by BEC end use

BEC end use	Foreign	Domestic	MNE total	N HS6	Value (\$bn)
Intermediate	0.476	0.155	0.631	3,072	1,667.8
Consumption	0.409	0.087	0.496	1,193	449.1
Capital	0.647	0.056	0.703	659	88.5
Mixed (passenger cars)	0.885	0.000	0.885	8	28.9
n.e.s.	0.198	0.345	0.543	20	62.6

4 Fact 3 — Multinational corporations from a small set of countries dominate exports

4.1 Original exhibit

Figure 13: Figure 4 of the note, reproduced on the current base: foreign-MNE export value by parent country, top 15 plus Other.

Note: Foreign MNEs with a recorded parent country.

Table 6: Foreign-MNE export value by parent country (numbers behind the figure)

Parent country	Share (%)	Value (\$bn)
USA	23.3	238.9
GBR	19.3	198.3
CAN	7.8	80.4
LIE	5.4	55.0
DEU	4.3	43.9
NLD	3.9	40.5
CHE	3.6	36.9
JPN	3.4	34.9
PAN	3.3	34.2
BRA	2.8	29.2
ESP	2.6	26.7
FRA	2.5	25.8
CHL	1.4	14.1
ZAF	1.1	11.3
AUS	1.1	11.2
Other (150 countries)	14.1	144.3
Foreign MNEs with recorded parent	100.0	1,025.6
Foreign MNEs, parent unknown (excluded above)	—	83.6

4.2 Variant: parent country × export destination — tables (item 1c)

Table 7: Parent region × destination region, export value (USD bn)

Parent region / Destination region	Latin America	North America	Europe	Asia	Africa	Oceania	Rest of World	Total
Latin America	49.5	19.0	18.1	33.4	1.5	0.9	0.4	122.6
North America	100.0	75.5	63.9	73.7	5.6	0.3	0.3	319.3
Europe	136.8	57.3	87.2	188.2	14.3	5.1	0.6	489.5

Local (unmatched) firms exports; row percentages; last column = row total, USD bn.

4.3 Variant: heat maps (item 1d)

**Figure 14:** Parent region × destination region, row %.

Figure 15: Top-15 parents × top-15 destinations: % of the parent's export value going to each destination.

Figure 16: Top-15 parents × top-15 destinations: cell share of all foreign-MNE export value (%).

Figure 17: Share of each parent's export value shipped to the parent's own country.

5 Fact 4 — A small set of large multinational groups accounts for the bulk of exports

5.1 Original exhibits

Figure 18: Figure 5 of the note, reproduced: foreign-MNE export value and parent counts by global affiliate-network size.

Table 15: Numbers behind Figure 5

Global affiliate count	Parents	Share of parents (%)	Export value (\$bn)	Share of value (%)
1	5,982	48.4	54.3	5.4
2–10	3,397	27.5	124.4	12.4
11–100	1,893	15.3	261.7	26.2
>100	1,099	8.9	560.2	56.0
All parents with a network record	12,371	100	1,000.6	100

Foreign-MNE parents (parent name key) exporting from the nine origins; 98% of parents and 97% of foreign-MNE export value have a matched global-network record (Orbis $\cup$ D&B roster, src/16). Network size = number of distinct worldwide affiliates.

Figure 19: Figure 6 of the note, reproduced: product-level export concentration, naive firm count vs grouping affiliates by parent.

Table 16: Numbers behind Figure 6: HHI, top-exporter share, effective number of exporters

Sample	Measure	Naive	Within country	Across countries
<i>All products: 5,929 HS6, 100% of value</i>				
	Mean HHI	0.192	0.209	0.215
	Mean top-exporter share	31.0%	32.5%	33.7%
	Effective number of exporters (1/HHI)	12.5	11.7	10.4
<i>MNE-intensive products (MNE $\geq$ 50% of exports): 1,887 HS6, 53% of value</i>				
	Mean HHI	0.234	0.262	0.270
	Mean top-exporter share	36.0%	38.7%	39.8%
	Effective number of exporters (1/HHI)	8.9	8.0	7.4

Value-weighted means across HS6 products (nine origins, Ecuador excluded). Naive: each exporting affiliate (Tax ID) is a firm; then affiliates of the same global parent are grouped within a country and across countries.

5.2 Variant: groups versus affiliates inside the market cells (item 1e, “MNE cantidad”)

Table 17: Affiliates per group in the origin–destination–product–year cells

Origin-destination-product-year cells with ≥ 1 MNE	
Cells	1,008,755
MNE affiliates per cell (mean)	1.91
MNE groups per cell (mean)	1.90
Affiliates per group, pooled	1.01
Affiliates per group, value-weighted mean	1.08
Cells where one group exports through > 1 affiliate (%)	1.0

Group = ultimate parent (Orbis GUO id or D&B global ultimate; parent name when the id is missing).

Table 18: Fact-5 regressions with $\ln(\# \text{ MNE groups})$ in place of $\ln(\# \text{ MNE firms})$

HS6 products with export value $\geq$ \$500m ranked by the domestic-MNE share. For./Dom./Local = foreign-MNE, domestic-MNE and local-firm shares of the product's export value, percent (pooled 2006–2022, nine LAC origins). Foreign = matched firms whose parent is abroad or unknown; Domestic = parent in the exporting country; Local = unmatched. Lead parent = largest parent country among the product's foreign MNEs and its share of the product's foreign-MNE value.

Table 30: Distribution of the HS6 foreign share, numbers

Foreign share bin (%)	Share of value	MNE share of exporting firms	N HS6
0–10	0.048	0.250	1426.000
10–20	0.054	0.285	731.000
20–30	0.189	0.329	652.000
30–40	0.202	0.372	591.000
40–50	0.127	0.411	519.000
50–60	0.059	0.433	442.000
60–70	0.070	0.435	386.000
70–80	0.074	0.470	311.000
80–90	0.129	0.479	311.000
90–100	0.048	0.530	560.000

MNE share of exporting firms = matched firm-cells (firm x destination x HS6 x year) over all firm-cells in the bin's products.

9 The four sectors at a glance (item 2)

Sector definitions in the conventions above. The full set of exhibits within each sector is in the companion document *WP_sectors*.

Table 31: The four sectors: total and MNE exports, shares, leading parents

Sector	Total exports (\$bn)	MNE exports (\$bn)	Foreign (%)	Domestic (%)	Leading parents (share of foreign)
Agriculture	788.4	375.3	38.1	9.5	USA 0.24, CHE 0.11, NLD 0.10
Mining & fuels	810.3	597.2	49.2	24.5	GBR 0.36, USA 0.21, CAN 0.16
Manufacturing	788.3	470.1	51.6	8.0	USA 0.25, GBR 0.14, DEU 0.09
Rest	6.8	5.2	47.9	28.0	USA 0.39, GBR 0.12, ESP 0.11
All	2,393.8	1,447.8	46.3	14.1	

Agriculture = HS 01–24; Mining & fuels = HS 25–27 and 71 (precious metals and stones); Manufacturing = HS 28–97 (excl. 71); Rest = HS 98–99, chapter 00 and unclassifiable codes. Services are not observable in customs merchandise data. Pooled 2006–2022, nine LAC origins. Foreign / Domestic = share of the row's export value; leading parents = the three largest parent countries among the row's foreign MNEs with their share of the row's foreign-MNE value.

**Figure 24:** Foreign and domestic MNE shares by sector.

Figure 25: Foreign-MNE share by origin and sector (%).

Table 32: Composition (Panel A) and foreign-MNE share (Panel B) by origin and sector

Origin	Agriculture	Mining & fuels	Manufacturing	Rest	All
<i>Panel A: composition of the origin's exports in the scope, % (rows sum to 100)</i>					
ARG	57.4	9.9	32.7	0.0	100.0
CHL	21.9	29.7	46.9	1.4	100.0
COL	16.3	63.4	20.3	0.0	100.0
CRI	41.5	1.0	57.5	0.0	100.0
DOM	23.1	22.8	54.1	0.0	100.0
PER	19.4	61.0	19.6	0.0	100.0
PRY	85.2	1.1	13.7	0.0	100.0
SLV	22.1	3.0	74.9	0.0	100.0
URY	63.0	2.4	34.6	0.0	100.0
All origins	32.9	33.9	32.9	0.3	100.0
<i>Panel B: foreign-MNE share of export value within the cell, %</i>					
ARG	37.8	75.1	60.4	—	48.9
CHL	29.6	73.9	39.9	48.6	47.9
COL	28.0	30.1	57.8	12.7	35.3
CRI	44.5	46.9	70.9	100.0	59.7
DOM	40.7	85.3	73.2	—	68.4
PER	33.0	52.2	30.6	78.0	44.2
PRY	65.0	44.1	37.9	—	61.1
SLV	28.9	58.8	52.5	1.5	47.4
URY	51.8	42.9	55.3	—	52.8
All origins	38.1	49.2	51.6	47.9	46.3

Pooled 2006–2022. Panel A: share of each sub-sector in the origin's exports within the scope. Panel B: foreign-MNE share of export value in each origin × sub-sector cell ('—' = no exports); 'All' = the origin's overall foreign-MNE share in the scope.

Table 33: Foreign-MNE exports: destination region by sector (row %)

Sector / Destination region	Latin America	North America	Europe	Asia	Africa	Oceania	Rest of World	Total
Agriculture	31.1	13.8	20.2	28.1	6.1	0.4	0.4	300.6
Mining & fuels	14.3	14.6	24.7	45.5	0.5	0.2	0.2	398.3
Manufacturing	50.8	20.7	9.3	17.3	0.7	1.1	0.2	407.0
Rest	37.3	42.2	17.2	2.9	0.1	0.2	0.1	3.3

Foreign-MNE exports: destination mix of each sector, row percentages; last column = row total, USD bn.

Table 34: Memo: service-sector affiliates among matched exporters (NAICS of the affiliate)

NAICS sector of the matched exporting affiliate	% of matched export value
goods-producing or unknown	82.4
information, finance, professional, holdings (51–56)	7.7
wholesale / retail trade (42–45)	7.4
other services (61–92)	1.8
transport, logistics (48–49)	0.6

Memo. Customs data record goods; ‘services’ can only be approached through the affiliate’s own industry code. Matched exporters whose NAICS is a trade, logistics, finance or holding code export goods produced elsewhere in the group or bought from local suppliers.

A Numbers behind the figures

A.1 All goods

Figure 1 split by parent country. Value-weighted; pooled 2006–2022; nine LAC origins (Ecuador excluded). The foreign-MNE bar is split into the five largest parent countries by foreign-MNE export value in the scope and ‘Other foreign’ (all remaining parents, including matched firms with no recorded parent country); domestic MNEs have a parent in the exporting country.
