1 How to read this document

Companion to *WP_total*: the same six facts and the HS6 section, computed within each sector—agriculture (HS 01–24), manufacturing (HS 28–97 excluding 71), mining & fuels (HS 25–27 and 71) and the rest (HS 98–99, chapter 00 and unclassifiable codes; services are not observable in customs merchandise data)—followed, for each sector, by the sub-classification block: HS sections, BEC Rev.4 end use (consumption goods vs inputs), BEC detailed categories, SITC Rev.3 divisions, NAICS 3-digit, Lall (2000) categories and, for agriculture, an agro-inputs flag. Each split gives total and MNE exports, foreign and domestic shares, the three leading parents, the foreign/domestic bars, an origin $\times$ sub-sector heat map with its two-panel table (composition; foreign share) and the parent-country composition. Quintiles, top-10 lists and parent rankings are recomputed within the sector.

Conventions (identical to the note). Matched = the firm was found in Orbis or D&B (`_merge_DNB_Orbis=3`); domestic MNE = parent in the exporting country; foreign MNE = matched minus domestic, so matched firms with no recorded parent count as foreign; nine origins (Ecuador excluded); value-weighted; pooled 2006–2022; navy = foreign, light gray = domestic. Wherever the foreign bar is split by home country, the ten largest parent countries (by foreign-MNE export value in the scope) are shown in shades of navy (rank 1 darkest) and every other foreign MNE—including those with no recorded parent—is pooled into “Other foreign MNEs” (gray-blue); domestic MNEs keep the light gray. Two-way country tables show the top-10 parents and destinations; heat maps the top 15. Regressions use plain logs (a zero count drops the cell from that column; no $\ln(1+x)$) and cluster at origin–destination. Sectors: agriculture = HS 01–24; mining & fuels = HS 25–27 and 71; manufacturing = HS 28–97 excluding 71; rest = HS 98–99, chapter 00 and unclassifiable codes (services are not in customs data).

Table 1: The four sectors: total and MNE exports, shares, leading parents

Sector	Total exports (\$bn)	MNE exports (\$bn)	Foreign (%)	Domestic (%)	Leading parents (share of foreign)
Agriculture	788.4	375.3	38.1	9.5	USA 0.24, CHE 0.11, NLD 0.10
Mining & fuels	810.3	597.2	49.2	24.5	GBR 0.36, USA 0.21, CAN 0.16
Manufacturing	788.3	470.1	51.6	8.0	USA 0.25, GBR 0.14, DEU 0.09
Rest	6.8	5.2	47.9	28.0	USA 0.39, GBR 0.12, ESP 0.11
All	2,393.8	1,447.8	46.3	14.1	

Agriculture = HS 01–24; Mining & fuels = HS 25–27 and 71 (precious metals and stones); Manufacturing = HS 28–97 (excl. 71); Rest = HS 98–99, chapter 00 and unclassifiable codes. Services are not observable in customs merchandise data. Pooled 2006–2022, nine LAC origins. Foreign / Domestic = share of the row’s export value; leading parents = the three largest parent countries among the row’s foreign MNEs with their share of the row’s foreign-MNE value.

Pooled 2006–2022. Panel A: share of each sub-sector in the origin's exports within the scope (rows sum to 100). Panel B: foreign-MNE share of export value in each origin × sub-sector cell ('—' = no exports); 'All' = the origin's overall foreign-MNE share in the scope.

Table 3: Memo: service-sector affiliates among matched exporters (NAICS of the affiliate)

NAICS sector of the matched exporting affiliate	% of matched export value
goods-producing or unknown	82.4
information, finance, professional, holdings (51–56)	7.7
wholesale / retail trade (42–45)	7.4
other services (61–92)	1.8
transport, logistics (48–49)	0.6

Memo. Customs data record goods; ‘services’ can only be approached through the affiliate’s own industry code. Matched exporters whose NAICS is a trade, logistics, finance or holding code export goods produced elsewhere in the group or bought from local suppliers.

Share of each origin’s export value (all destinations) moved by multinationals whose recorded ultimate parent is in the United States, all goods and by sector; origins sorted by the all-goods share. Sectors as in the conventions (rest not shown, included in all goods). Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

Figure 4: Share of each parent's export value shipped to the parent's own country: all goods and the three sectors, top-10 parents.

Note: Hatched bars: the parent exports less than \$1bn in the sector, so the share is fragile; the parent's exports in each scope are in parentheses.

Top-10 parent countries by foreign-MNE export value (all goods). Home share = value the parent's affiliates export from the nine origins to the parent's country, over everything they export from the nine origins, all goods and within each sector. Shares computed on less than \$1bn of exports are fragile (see the value columns). Pooled 2006–2022; foreign MNEs with a recorded parent country.

Figure 5: Exports to the United States by origin: share moved by US-parent MNEs, other foreign MNEs, domestic MNEs and local firms — all goods (left) and manufacturing (right).

Table 6: Exports to the United States by sector: who carries them (%)

Rest	1.7	24.5	53.9	4.5	17.1

Exports from the nine origins to the United States by sector, and the share of that value moved by each type of exporter. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

Fact 6 in one table: the distance elasticity of firm exports and its attenuation for foreign and for domestic multinationals (columns (1) and (2) of the full table in each scope), all goods and within each sector. Firm $\times$ origin $\times$ destination $\times$ product $\times$ year; non-MNE flows are the omitted base, so the interaction is the difference from the base elasticity. SE clustered at origin–destination in parentheses. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$

Part I

Agriculture (HS 01–24)

2 Fact 1 — Multinational corporations account for a large share of export values across countries

2.1 Original exhibit

Figure 6: Agriculture (HS 01–24): Figure 1 of the note, reproduced on the current base: MNE share of export value by origin, foreign vs domestic.

Note: Value-weighted; pooled 2006–2022; nine LAC origins. Bar length = total MNE share; numbers in the appendix.

2.2 Variant: the foreign bar split by the multinational's home country (item 1a)

Figure 7: Agriculture (HS 01–24): MNE share of export value by origin, foreign bar split by parent country (top 10, Other foreign, Domestic).

Figure 8: Agriculture (HS 01–24): companion heat map: share of each origin's export value by parent-country group (%).

3 Fact 2 — Foreign multinationals specialize in complex products, domestic ones in primary goods

3.1 Original exhibits

Figure 9: Agriculture (HS 01–24): Figure 2 of the note, reproduced: MNE share of export value by Product Complexity Index quintile.

Note: Value-weighted at HS6; quintiles of the Hausmann–Hidalgo PCI over the scope’s HS6 products (Q1 = least complex).

Figure 10: Agriculture (HS 01–24): Figure 3 of the note, reproduced: MNE share of export value by Lall (2000) technology category.

4.4 Variant: seen from the destination — who carries the exports that reach each market (revision 6)

The exhibits above ask where each parent ships. These turn the question around: of the value that reaches a destination, how much is moved by multinationals whose parent sits in that destination, by US-parent MNEs, by other foreign MNEs, by domestic MNEs and by local (unmatched) firms.

Agriculture (HS 01–24). Exports from each origin to the United States and the share of that value moved by each type of exporter; origins sorted by the US-parent share. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

Agriculture (HS 01–24). The 8 largest destination markets (EU-27 pooled) and the share of the value reaching each one moved by each type of exporter. ‘Parent in the destination’: the exporter’s ultimate parent is in the destination country (for the EU-27, in any member state); for the USA this group is the US-parent MNEs and the US-parent column is left blank. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

>100	383	12.0	132.2	50.3
All parents with a network record	3,182	100	262.7	100

Foreign-MNE parents (parent name key) exporting from the nine origins; 98% of parents and 99% of foreign-MNE export value have a matched global-network record (Orbis $\cup$ D&B roster, src/16). Network size = number of distinct worldwide affiliates.

Figure 28: Agriculture (HS 01–24): Figure 6 of the note, reproduced: product-level export concentration, naive firm count vs grouping affiliates by parent.

Table 29: Agriculture (HS 01–24): Numbers behind Figure 6: HHI, top-exporter share, effective number of exporters

MNE share of exporting firms = matched firm-cells (firm x destination x HS6 x year) over all firm-cells in the bin's products.

9 Sub-classifications within the sector

Each split: total and MNE exports, foreign and domestic shares and the three leading parents (table); the foreign/domestic bars (figure); the origin × sub-sector heat map of the foreign share with its two-panel table (Panel A composition of the origin's exports in the sector, rows sum to 100; Panel B foreign-MNE share within the cell); and the parent-country composition (top-10 parents, Other foreign, Domestic). Sub-sectors below 0.5 % of the sector are pooled into “Other” in the tables and omitted from the heat maps below 1 %.

12.4 Variant: seen from the destination — who carries the exports that reach each market (revision 6)

The exhibits above ask where each parent ships. These turn the question around: of the value that reaches a destination, how much is moved by multinationals whose parent sits in that destination, by US-parent MNEs, by other foreign MNEs, by domestic MNEs and by local (unmatched) firms.

Manufacturing (HS 28–97 excl. 71). Exports from each origin to the United States and the share of that value moved by each type of exporter; origins sorted by the US-parent share. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

Manufacturing (HS 28–97 excl. 71). The 8 largest destination markets (EU-27 pooled) and the share of the value reaching each one moved by each type of exporter. ‘Parent in the destination’: the exporter’s ultimate parent is in the destination country (for the EU-27, in any member state); for the USA this group is the US-parent MNEs and the US-parent column is left blank. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

>100	1,037	10.1	239.8	65.2
All parents with a network record	10,304	100	368.1	100

Foreign-MNE parents (parent name key) exporting from the nine origins; 98% of parents and 98% of foreign-MNE export value have a matched global-network record (Orbis $\cup$ D&B roster, src/16). Network size = number of distinct worldwide affiliates.

Figure 69: Manufacturing (HS 28–97 excl. 71): Figure 6 of the note, reproduced: product-level export concentration, naive firm count vs grouping affiliates by parent.

Table 88: Manufacturing (HS 28–97 excl. 71): Numbers behind Figure 6: HHI, top-exporter share, effective number of exporters

Sample	Measure	Naive	Within country	Across countries

	Mean top-exporter share	46.8%	47.1%	48.7%
	Effective number of exporters (1/HHI)	6.8	6.6	6.0

Value-weighted means across HS6 products (nine origins, Ecuador excluded). Naive: each exporting affiliate (Tax ID) is a firm; then affiliates of the same global parent are grouped within a country and across countries.

HS6 products with export value $\geq$ \$500m ranked by the domestic-MNE share. For./Dom./Local = foreign-MNE, domestic-MNE and local-firm shares of the product's export value, percent (pooled 2006–2022, nine LAC origins). Foreign = matched firms whose parent is abroad or unknown; Domestic = parent in the exporting country; Local = unmatched. Lead parent = largest parent country among the product's foreign MNEs and its share of the product's foreign-MNE value.

Table 102: Manufacturing (HS 28–97 excl. 71): Distribution of the HS6 foreign share, numbers

MNE share of exporting firms = matched firm-cells (firm x destination x HS6 x year) over all firm-cells in the bin's products.

17 Sub-classifications within the sector

Each split: total and MNE exports, foreign and domestic shares and the three leading parents (table); the foreign/domestic bars (figure); the origin $\times$ sub-sector heat map of the foreign share with its two-panel table (Panel A composition of the origin's exports in the sector, rows sum to 100; Panel B foreign-MNE share within the cell); and the parent-country composition (top-10 parents, Other foreign, Domestic). Sub-sectors below 0.5 % of the sector are pooled into "Other" in the tables and omitted from the heat maps below 1 %.

Pooled 2006–2022. Sub-sectors on the rows, exporting countries on the columns. Panel A: share of each sub-sector in the origin's exports within the scope (columns sum to 100); 'All' = the sub-sector's share of the scope's exports. Panel B: foreign-MNE share of export value in each origin × sub-sector cell ('-' = no exports); 'All' = the sub-sector's overall foreign-MNE share; last row = the origin's overall foreign-MNE share in the scope.

Share of the row's export value by parent-country group, percent. The foreign-MNE bar is split into the 10 largest parent countries by foreign-MNE export value in the scope and 'Other foreign' (all remaining parents, including matched firms with no recorded parent country); domestic MNEs have a parent in the exporting country. The remainder of each row is local (unmatched) firms.

Share of the row's export value by parent-country group, percent. The foreign-MNE bar is split into the 10 largest parent countries by foreign-MNE export value in the scope and 'Other foreign' (all remaining parents, including matched firms with no recorded parent country); domestic MNEs have a parent in the exporting country. The remainder of each row is local (unmatched) firms.

Mining & fuels (HS 25–27, 71). Exports from each origin to the United States and the share of that value moved by each type of exporter; origins sorted by the US-parent share. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

Mining & fuels (HS 25–27, 71). The 8 largest destination markets (EU-27 pooled) and the share of the value reaching each one moved by each type of exporter. ‘Parent in the destination’: the exporter’s ultimate parent is in the destination country (for the EU-27, in any member state); for the USA this group is the US-parent MNEs and the US-parent column is left blank. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

Foreign-MNE parents (parent name key) exporting from the nine origins; 97% of parents and 96% of foreign-MNE export value have a matched global-network record (Orbis $\cup$ D&B roster, src/16). Network size = number of distinct worldwide affiliates.

**Figure 108:** Mining & fuels (HS 25–27, 71): Figure 6 of the note, reproduced: product-level export concentration, naive firm count vs grouping affiliates by parent.**Table 143:** Mining & fuels (HS 25–27, 71): Numbers behind Figure 6: HHI, top-exporter share, effective number of exporters

HS6 products with export value $\geq$ \$500m ranked by the domestic-MNE share. For./Dom./Local = foreign-MNE, domestic-MNE and local-firm shares of the product's export value, percent (pooled 2006–2022, nine LAC origins). Foreign = matched firms whose parent is abroad or unknown; Domestic = parent in the exporting country; Local = unmatched. Lead parent = largest parent country among the product's foreign MNEs and its share of the product's foreign-MNE value.

Table 157: Mining & fuels (HS 25–27, 71): Distribution of the HS6 foreign share, numbers

Foreign share bin (%)	Share of value	MNE share of exporting firms	N HS6

80–90	0.254	0.681	5
90–100	0.015	0.637	22

MNE share of exporting firms = matched firm-cells (firm x destination x HS6 x year) over all firm-cells in the bin's products.

25 Sub-classifications within the sector

Each split: total and MNE exports, foreign and domestic shares and the three leading parents (table); the foreign/domestic bars (figure); the origin × sub-sector heat map of the foreign share with its two-panel table (Panel A composition of the origin's exports in the sector, rows sum to 100; Panel B foreign-MNE share within the cell); and the parent-country composition (top-10 parents, Other foreign, Domestic). Sub-sectors below 0.5 % of the sector are pooled into “Other” in the tables and omitted from the heat maps below 1 %.

Part IV

Rest (HS 98–99 and unclassified codes; services are not in customs data)

26 Fact 1 — Multinational corporations account for a large share of export values across countries

26.1 Original exhibit

Note: Value-weighted; pooled 2006–2022; nine LAC origins. Bar length = total MNE share; numbers in the appendix.

26.2 Variant: the foreign bar split by the multinational’s home country (item 1a)

Figure 126: Rest (HS 98–99 and unclassified codes; services are not in customs data): MNE share of export value by origin, foreign bar split by parent country (top 10, Other foreign, Domestic).

27 Fact 2 — Foreign multinationals specialize in complex products, domestic ones in primary goods

Not computable for this scope: its HS codes (chapters 98–99, chapter 00 and unclassifiable lines) carry no product characteristics (PCI, Lall, elasticities), so the product-sophistication exhibits have no content here.

28 Fact 3 — Multinational corporations from a small set of countries dominate exports

28.4 Variant: seen from the destination — who carries the exports that reach each market (revision 6)

The exhibits above ask where each parent ships. These turn the question around: of the value that reaches a destination, how much is moved by multinationals whose parent sits in that destination, by US-parent MNEs, by other foreign MNEs, by domestic MNEs and by local (unmatched) firms.

Rest (HS 98–99 and unclassified codes; services are not in customs data). Exports from each origin to the United States and the share of that value moved by each type of exporter; origins sorted by the US-parent share. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

Rest (HS 98–99 and unclassified codes; services are not in customs data). The 8 largest destination markets (EU-27 pooled) and the share of the value reaching each one moved by each type of exporter. ‘Parent in the destination’: the exporter’s ultimate parent is in the destination country (for the EU-27, in any member state); for the USA this group is the US-parent MNEs and the US-parent column is left blank. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched.

29 Fact 4 — A small set of large multinational groups accounts for the bulk of exports
