1 How to read this document

This document collects, without selection, every figure, table and regression produced for the items Christian raised on the stylized-facts document (v. 2026-07-29): (1a) the figures split by the multinational’s home country; (1b) alternative product-sophistication measures for Figure 2, in particular the Fontagné–Guimbard–Orefice (2022) elasticities; (1c, 1d) two-way tables and heat maps of parent country $\times$ destination; (1e) headquarters versus affiliates and MNE counts; (1f) HS6-level shares with descriptions; (2) the agriculture version and the four-sector comparison. Each section opens with a short reading note; the exhibits follow. Appendices hold the per-origin tables. Everything is generated by `stylized_facts/python/wp_*.py` in the project repository (github.com/jsvp97/IADB_Orbis_DNB_Customs_Final); the reader’s guide with the same numbers is `docs/WP_RESULTS_2026-09-07.md`.

Conventions. Identical to the stylized-facts document: `matched` = the firm was found in Orbis or D&B (`_merge_DNB_Orbis=3`); domestic MNE = parent in the exporting country; foreign MNE = matched minus domestic, so matched firms with no recorded parent count as foreign (shown hatched wherever parents are split); nine origins (Ecuador excluded); value-weighted; pooled 2006–2022; navy = foreign, light gray = domestic. Scopes: *all goods* (\$2,394 bn), *agriculture* (HS 01–24, \$788 bn), *mining & fuels* (HS 25–27 and 71, \$810 bn), *manufacturing* (\$795 bn).

Three data facts to keep in mind.

1. **The base used here has a parent country for 92 % of foreign-MNE export value;** the July document’s Figure 4 was drawn on a copy in which about half of that value had no recorded parent. The parent ranking therefore changes (USA 23.3 % > GBR 19.3 % > CAN 7.8 % > LIE 5.4 % > DEU > NLD; Table 1), Liechtenstein appears (foundations owning Argentine and Chilean exporters of copper ore, oil-cake and cereals — a conduit, to be treated like PAN/CHE/NLD), and the domestic-MNE share rises where the recovered parents are the origin country (COL 0.28 $\rightarrow$ 0.39, CHL 0.02 $\rightarrow$ 0.14). The working paper must state which base each exhibit uses.
2. **“Headquarters exporters” are not identifiable.** Every matched exporter has a global ultimate owner different from itself (0 of 5.45 M firm-cells); the match runs through ownership links, so a LAC group’s head company exporting from home is in the unmatched pool. What is identifiable is the group’s presence *at the destination* through its headquarters (the affiliate ships to the parent’s country) or through another affiliate — Section 5 is built on that.
3. **The two match flags differ by \$357 bn.** Both flags: \$1,411 bn; only the document’s flag: \$90 bn; only the manual-review flag used in the matching repository (`_merge_final_review`): \$267 bn; neither: \$819 bn.

2 Item 1a — Figures 1–4 with the foreign bar split by the parent’s country

Reading. The foreign-MNE bar of each figure is split by the parent’s country (the eight largest by value, China forced in, “Other foreign”, and hatched “parent unknown”); domestic MNEs stay gray; the bold number is the total MNE share, as in the document. US parents dominate the Central-American and Paraguayan origins (CRI 0.30, PRY 0.30, SLV 0.28 of *all* exports) and are minor in the Andean and Southern-Cone commodity exporters (CHL 0.03, URY 0.05, ARG 0.08, PER 0.08); GBR is the largest parent in Chile (0.21) and Peru (0.11), CAN in the Dominican Republic (0.16, gold), LIE in Chile and Argentina. China is at most 0.04 (Uruguay, beef). Across PCI quintiles the rising foreign share (0.46 → 0.65) is carried by USA in Q3–Q4 and by DEU and JPN in Q5 (vehicles); GBR and CAN sit in Q1 (ores, metals). In the Lall classification high-tech is USA (0.22), medium-tech USA+DEU+JPN, low-tech CAN (gold) and USA (apparel), primary GBR and domestic MNEs.

2.1 Agriculture (HS 01–24)

Parents in agriculture: USA 23.9 %, CHE 11.0 %, NLD 9.5 %, LIE 7.6 %, BRA 3.8 %, ESP 3.8 %, DEU 3.5 %, SAU 3.2 % (Almarai/SALIC grain in ARG and BRA); 12 % of foreign-MNE agro value has no recorded parent. Paraguay is the outlier: US parents alone are 0.35 of all agro exports (soy crushers).

2.2 Mining & fuels and manufacturing

Mining & fuels: GBR 36 %, USA 21 %, CAN 16 %, LIE 7 %. Manufacturing: USA 25 %, GBR 14 %, DEU 9 %, JPN 7 %, PAN 5 %.

3 Item 1b — Figure 2 with other sophistication measures; substitution elasticities

Reading. The Fontagné–Guimbard–Orefice (2022) tariff-based import-demand elasticities (CEPII ProTEE 0.1, HS6 rev. 2007; 90 % of HS6 lines, 78 % of export value) are used in absolute value: larger $|\sigma|$ = more substitutable. Christian’s hypothesis — more substitutable = less complex = less foreign presence

— **is not in the data:** (i) the elasticity measures are essentially orthogonal to complexity (value-weighted $\text{corr}(\text{PCI}, |\sigma| \text{ FGO}) = 0.08$, $\text{corr}(\text{PCI}, \sigma \text{ BW}) = 0.04$, Table 3); (ii) there is no monotone gradient across $|\sigma|$ quintiles (0.46, 0.38, 0.45, 0.34, 0.52; Q4 is a domestic-MNE quintile: copper cathodes and crude oil); (iii) in the Table-A.4 ladder with PCI and upstreamness as controls, $|\sigma|$ FGO enters *positive* for the foreign share (+0.034 per s.d.) and negative for the domestic share (−0.042): within markets, foreign affiliates are relatively more present in *more* substitutable products (Table 5). Only PCI and RHCI ($\text{corr } 0.74$) sort foreign presence monotonically. Suggested use: FGO as a robustness measure, PCI as the headline. Quintiles are over HS6 products, unweighted, as in the document.

3.1 Agriculture

Within agriculture PCI still rises with the foreign share (0.29, 0.49, 0.38, 0.42, 0.55) and $|\sigma|$ FGO falls mildly (0.40, 0.40, 0.37, 0.29, 0.33); $\text{corr}(\text{PCI}, |\sigma| \text{ FGO}) = -0.17$, $\text{corr}(\text{PCI}, \sigma \text{ BW}) = -0.57$ among agricultural products.

4 Items 1c and 1d — Parent country × destination: tables and heat maps

Reading. Rows = region or country of the multinational's parent (plus domestic MNEs and local exporters as comparison rows), columns = destination region or country; three versions of each matrix: value (USD bn), row % (destination mix of each parent group) and column % (who supplies each destination). Only

9.1 % of known-parent foreign-MNE exports go to the parent’s own country (USA 0.22, CAN 0.20, JPN 0.09, DEU 0.08, NLD 0.02, GBR 0.01, CHE and LIE 0.00). European and Panamanian parents are China-facing commodity platforms (GBR → CHN 37 %, PAN → CHN 35 %); Japanese, German and Dutch parents are Brazil-facing regional manufacturers (JPN → BRA 45 %, DEU → BRA 32 %); only US and Canadian parents ship home in size. Domestic MNEs sell 33 % to North America; local exporters are spread evenly across regions. One row-% table per LAC origin is in Appendix B.

5 Item 1e — Headquarters versus affiliates; MNE counts

Reading. Because every matched exporter is an affiliate (data fact 2), the headquarters question is answered on the destination side: a foreign multinational is present at the destination *through its headquarters* (the affiliate ships to the parent’s country), *through another affiliate* (Orbis/D&B roster), or *not at all*. Of foreign-MNE export value, 8.4 % is shipped to the HQ country, 40.5 % to destinations with another affiliate and 51.1 % to destinations where the group is not present (SLV 41 %, DOM 29 % and CRI 26 % through HQ against PRY 2 %, PER 4 %, CHL 4 %). “MNE counts”: counting distinct *groups* rather than exporting firms changes nothing at the market-cell grain (1.01 affiliates per group per cell; Table 19), so Table 21 reproduces the firm-count coefficients to the third decimal. In the Fact-5 regressions (Table 20) the intensive-margin benchmark reproduces the document exactly (non-MNE exports on $\ln \#$ MNE firms: 0.239 with origin $\times$ dest $\times$ product and origin $\times$ dest $\times$ year FE) and the **association with local exports is strongest for foreign MNEs that are not present at the destination** (0.135 vs 0.082 for HQ-present, tightest FE); multinationals shipping to their own headquarters do not crowd local exporters out more than the others. In the distance regressions (Table 22) the attenuation of the distance elasticity is +0.065 for HQ-present, +0.067 for affiliate-present and +0.042 for non-present foreign MNEs, and +0.104 for domestic MNEs whose group has an affiliate in the destination.

‘Through headquarters’: the affiliate ships to its parent’s country. ‘Through another affiliate’: the group has an affiliate in the destination (Orbis/D&B roster) that is not the parent. Pooled 2006–2022. Every matched exporter is itself an affiliate (see the script header), so an ‘exporter is the HQ’ split is not available in this base.

'Through headquarters': the affiliate ships to its parent's country. 'Through another affiliate': the group has an affiliate in the destination (Orbis/D&B roster) that is not the parent. Pooled 2006–2022. Every matched exporter is itself an affiliate (see the script header), so an 'exporter is the HQ' split is not available in this base.

6 Item 1f — Products at HS6, with descriptions

Reading. The top 30 HS6 products are 57 % of exports. Crude oil (\$209 bn) is 75 % domestic-MNE (Ecopetrol, ENAP, YPF) and 21 % foreign; copper ore (\$206 bn) 83 % foreign, of which GBR 54 %; refined copper 32 % foreign and 65 % local (Codelco is unmatched); gold 40 % foreign (CAN two thirds of it); soybeans 64 % foreign (USA half); coal 77 % foreign (GBR, USA); trucks 85 % foreign (DEU, JPN); coffee 34 % foreign (DEU 40 % of it); T-shirts 60 % foreign, almost all US. 38 % of export value is in products where foreign MNEs hold more than half; 15 HS6 products make 50 % of foreign-MNE exports (10 in agriculture). Per-origin top-15 tables are in Appendix C.

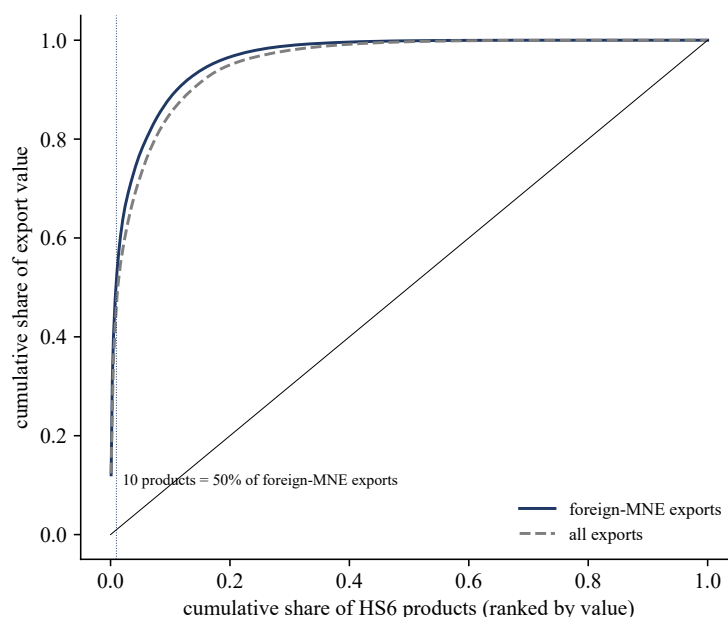

Figure 32: Agriculture: concentration of foreign-MNE exports across HS6 products

7 Item 2 — Agriculture focus and the four-sector version

Reading. Agriculture (HS 01–24), mining & fuels (HS 25–27 and 71) and manufacturing each account for about a third of the nine origins’ exports. Foreign-MNE shares are 0.38, 0.49 and 0.52; the domestic-MNE share is 0.25 in mining (state oil and copper companies) against 0.08–0.09 elsewhere. **Services are not observable in customs merchandise data;** the only service-related information is the affiliate’s own NAICS: 17.6 % of matched export value is shipped by affiliates classified in trade and services (wholesale, logistics, holdings). A services version needs another source.

Within agriculture: BEC end use (the classification referred to as “VEC” in the notes) splits agro exports into intermediate goods (56 %, foreign share 0.41) and consumption goods (44 %, 0.35); primary food for industry (BEC 111) has the highest foreign share (0.49). Agricultural *inputs* (fertilisers, agrochemicals, seeds for sowing, animal feed, machinery, live animals; whole soybeans counted as output) are 17.5 % of agro exports, dominated by soybean oil-cake and fishmeal, with a foreign share of 0.36 against 0.39 for food, fibres and beverages — no input premium; their parents are the Swiss, Liechtenstein and US grain traders. SITC divisions, NAICS 3-digit and Lall complete the set; each split has an origin × sub-sector heat map of the foreign share.

7.1 Four sectors

Table 33: MNE shares by sector

Sector	Value (\$bn)	% of scope	Foreign	Domestic	N HS6	Leading parents (share of foreign)

Agriculture = HS 01–24; Mining & fuels = HS 25–27 and 71 (precious metals and stones); Manufacturing = all other chapters.
Services are not observable in customs merchandise data. Pooled 2006–2022, nine LAC origins.

Figure 2 split by parent country. Quintiles of the Hausmann–Hidalgo Product Complexity Index over HS6 products. Value-weighted; pooled 2006–2022; nine LAC origins (Ecuador excluded). Foreign MNEs have a parent country different from the exporting country; the foreign bar is split by the parent's country (top parents by value, then Other); 'Unknown' = matched firms with no recorded parent country (counted as foreign, as in the stylized-facts document). Domestic MNEs have a parent in the exporting country.
