

Multinational Firms and Trade in Latin America

Six stylized facts — working paper draft

Ignacio Marra de Artiñano

Gabriel Scattolo

Sebastián Velásquez

Christian Volpe Martincus

September 2026

Data. Customs transactions of nine Latin American exporters (Argentina, Chile, Colombia, Costa Rica, the Dominican Republic, El Salvador, Paraguay, Peru and Uruguay), 2006–2022, at the firm $\times$ destination $\times$ HS6 product $\times$ year level, matched to the ownership records of Orbis and Dun & Bradstreet. A matched exporter is an affiliate of a multinational group: a *domestic* multinational when its ultimate parent is in the exporting country, a *foreign* multinational otherwise (matched firms with no recorded parent country count as foreign); unmatched exporters are *local* firms. Shares are value-weighted and pooled over 2006–2022. Sectors: agriculture = HS 01–24; mining and fuels = HS 25–27 and 71; manufacturing = HS 28–97 excluding 71. Where the foreign bar is split by the parent’s country, the ten largest parent countries are shown individually and every other foreign multinational is pooled. Matched exporters whose parent country is not recorded (7.5 % of foreign-MNE export value) are allocated to parent countries in proportion to the recorded parents of the same group, so every share by parent country refers to all foreign MNEs and adds up with the domestic and local shares; a share by parent country computed among recorded parents is therefore identical to the share of all foreign MNEs. Regressions use plain logarithms and cluster standard errors at origin–destination. Dollar values are annual averages: each origin’s pooled value divided by the number of years it is observed (Argentina 2011–2019, Chile 2009–2022, Colombia 2010–2021, Costa Rica 2010–2019, Dominican Republic 2012–2019, Peru 2010–2019, Paraguay 2012–2020, El Salvador 2006–2018, Uruguay 2010–2019).

1 Fact 1 — Multinational corporations account for a large share of export values across countries

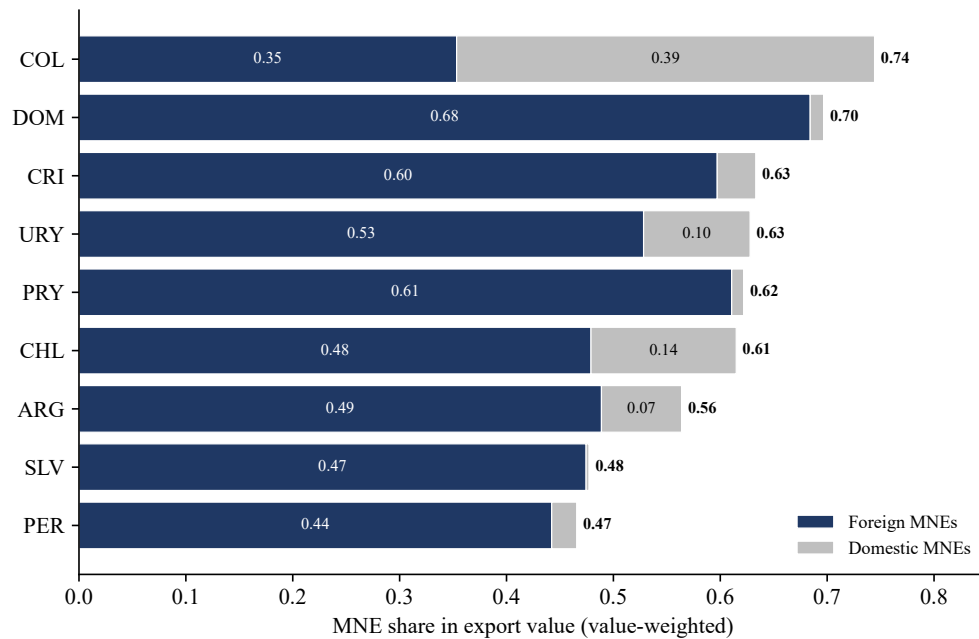

Figure 1: [Main text] MNE share of export value by origin: foreign and domestic multinationals.

Table 1: [Appendix] Numbers behind the previous figure: foreign, domestic and total MNE shares by origin

Origin	Foreign	Domestic	MNE total	Value (\$bn/yr)
COL	0.353	0.391	0.744	44.0
DOM	0.684	0.013	0.697	8.6
CRI	0.597	0.036	0.633	10.5
URY	0.528	0.100	0.628	7.0
PRY	0.611	0.011	0.622	7.3
CHL	0.479	0.136	0.615	34.2
ARG	0.489	0.075	0.564	66.4
SLV	0.474	0.003	0.477	5.0
PER	0.442	0.023	0.466	41.4
All	0.463	0.141	0.605	224.5

Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

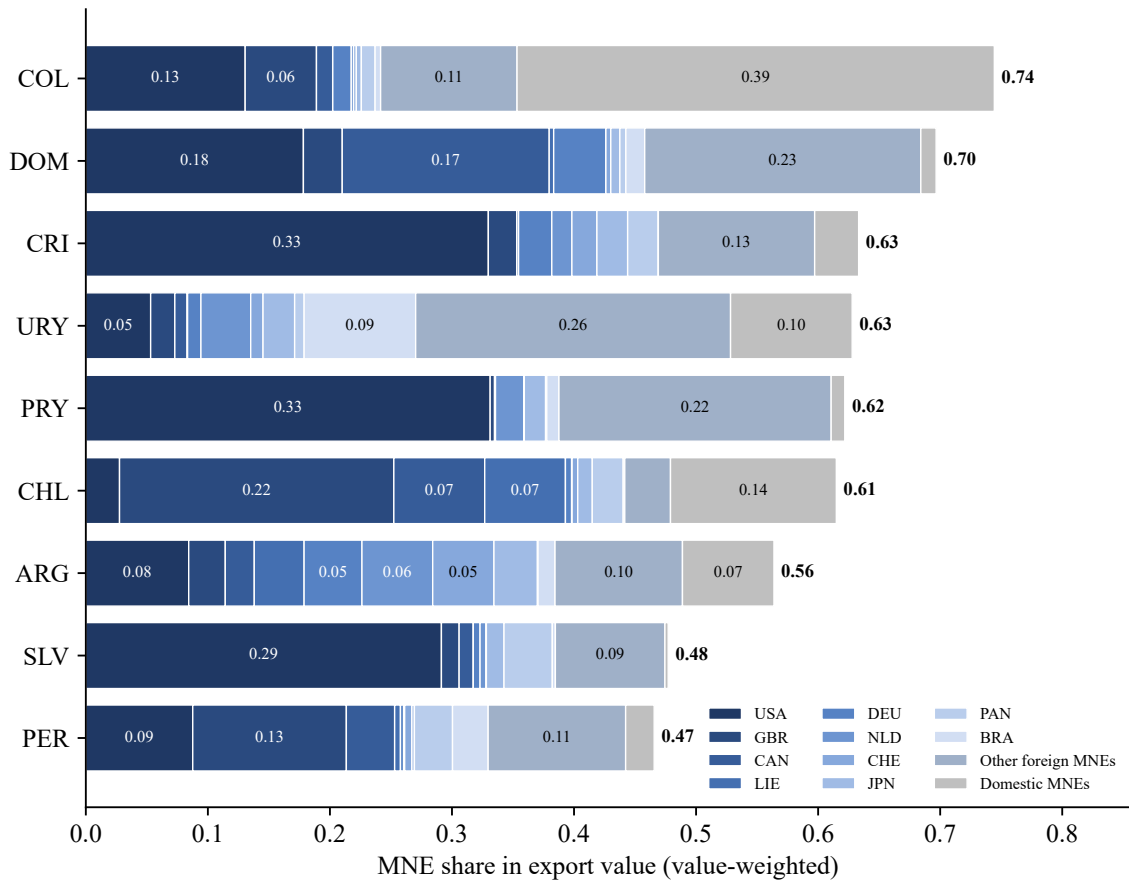

Figure 2: [Appendix] MNE share of export value by origin, foreign bar split by the parent's country (top 10, other foreign, domestic).

Table 2: [Appendix] Numbers behind the previous figure

Origin	USA	GBR	CAN	LIE	DEU	NLD	CHE	JPN	PAN	BRA	Other	Dom.	MNE total	Value (\$bn/yr)

Figure 1 split by parent country. Value-weighted; pooled 2006–2022; nine LAC origins (Ecuador excluded). The foreign-MNE bar is split into the 10 largest parent countries by foreign-MNE export value in the scope and 'Other foreign' (all remaining parents, including matched firms with no recorded parent country); domestic MNEs have a parent in the exporting country. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

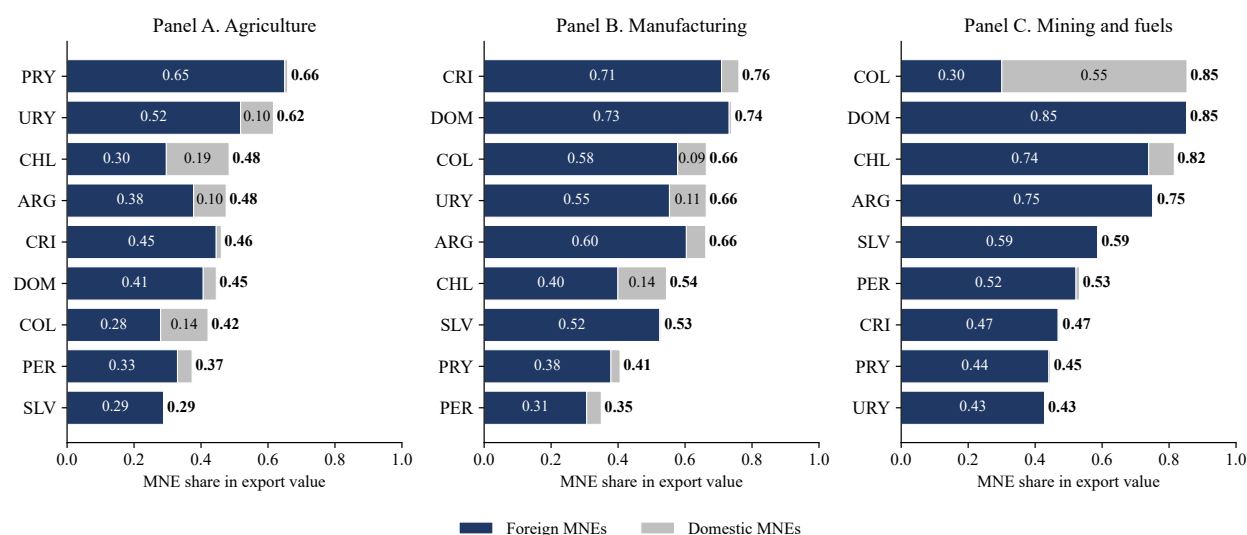

Figure 3: [Appendix] MNE share of export value by origin within each sector: foreign and domestic multinationals (Panel A agriculture, Panel B manufacturing, Panel C mining and fuels).

Table 3: [Appendix] The four sectors: total and MNE exports, foreign and domestic shares, leading parents

Sector	Total exports (\$bn/yr)	MNE exports (\$bn/yr)	Foreign (%)	Domestic (%)	Leading parents (share of foreign)
Agriculture	78.9	37.8	38.1	9.5	USA 0.24, CHE 0.11, NLD 0.10
Mining & fuels	72.4	52.4	49.2	24.5	GBR 0.36, USA 0.21, CAN 0.16
Manufacturing	72.7	43.9	51.6	8.0	USA 0.25, GBR 0.14, DEU 0.09
Rest	0.5	0.4	47.9	28.0	USA 0.39, GBR 0.12, ESP 0.11
All	224.5	134.5	46.3	14.1	

Agriculture = HS 01–24; Mining & fuels = HS 25–27 and 71 (precious metals and stones); Manufacturing = HS 28–97 (excl. 71); Rest = HS 98–99, chapter 00 and unclassifiable codes. Services are not observable in customs merchandise data. Pooled 2006–2022, nine LAC origins. Foreign / Domestic = share of the row's export value; leading parents = the three largest parent countries among the row's foreign MNEs with their share of the row's foreign-MNE value. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

1.1 The United States

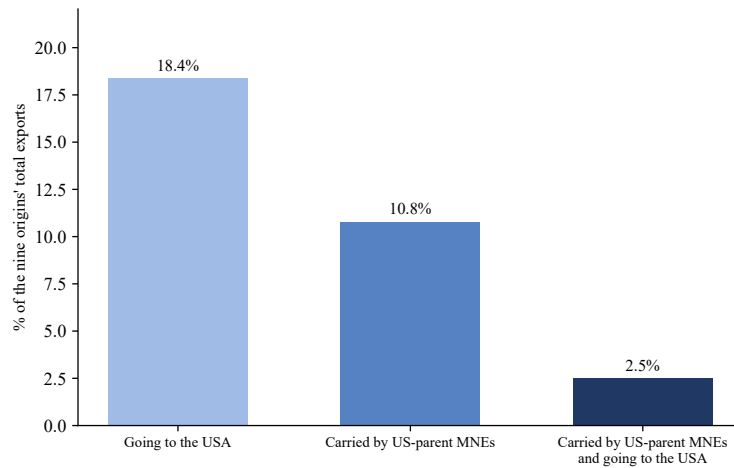

Figure 4: [Main text] Exports of the nine origins, as shares of total exports: going to the United States, carried by US-parent MNEs, and both.

Note: Same denominator for the three bars: total export value of the nine origins, all firms and destinations. The second bar is the USA's share of foreign-MNE value (23.3 %, Fact 3) times the foreign-MNE share of exports (46.3 %, Figure 1); the third bar is the second times the share of US-parent exports that goes to the United States (22.3 %, the USA row of the parent $\times$ destination tables in Fact 3).

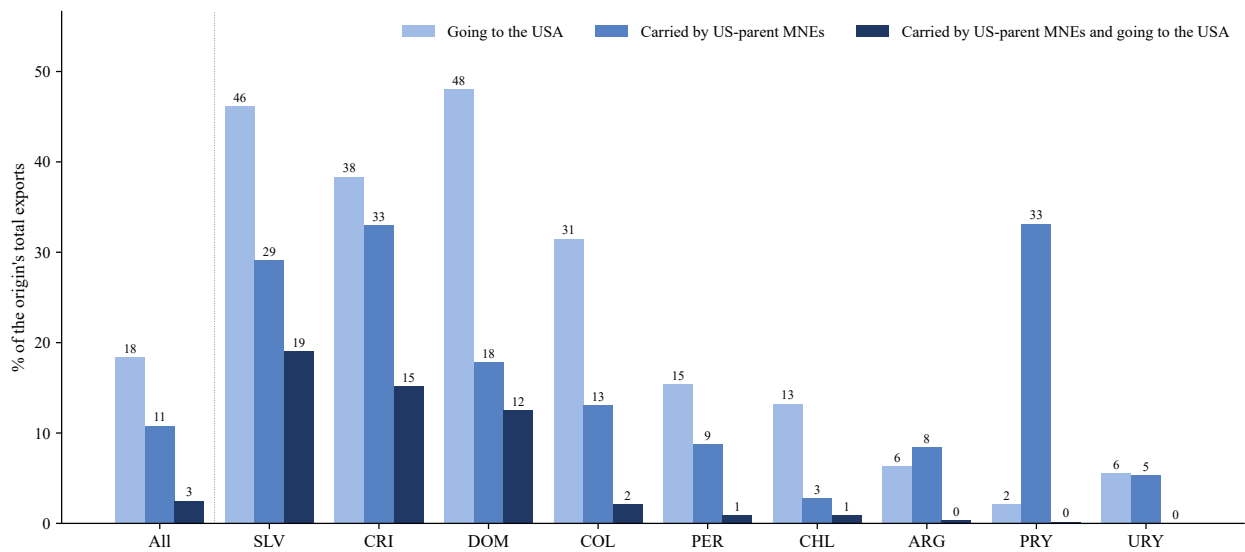

Figure 5: [Main text] The same three shares by origin (denominator: the origin's total exports).

Table 4: [Main text] Exports going to the United States, carried by US-parent MNEs, and both, as shares of total exports; and the US-parent share of the exports going to the United States

Origin	(1) % of exports going to the USA	(2) % of exports carried by US-parent MNEs	(3) % of exports carried by US-parent MNEs and going to the USA	(4) = (3)/(1): US-parent share of the exports going to the USA (%)	Total exports (\$bn/yr)
All	18.4	10.8	2.5	13.6	224.5
SLV	46.1	29.1	19.0	41.3	5.0
CRI	38.3	33.0	15.1	39.5	10.5
DOM	48.0	17.8	12.5	26.0	8.6
COL	31.5	13.1	2.1	6.8	44.0
PER	15.4	8.8	0.9	6.0	41.4
CHL	13.3	2.8	0.9	6.9	34.2
ARG	6.3	8.4	0.3	5.5	66.4
PRY	2.1	33.1	0.2	8.1	7.3
URY	5.5	5.3	0.0	0.4	7.0

Columns (1)–(3) have the same denominator, the origin’s total exports (all firms, all destinations): (1) value shipped to the United States by any firm; (2) value exported by multinationals whose ultimate parent is in the United States, to any destination; (3) the intersection. Column (4) changes the denominator to the exports that go to the United States and is the ratio (3)/(1); it is the US-parent bar of the ‘who carries the exports to the USA’ figure. Origins sorted by column (3). Foreign MNEs whose parent country is not recorded (7.5% of foreign-MNE export value) are allocated to parent countries in proportion to the recorded parents of the same group, so every share by parent country refers to all foreign MNEs and adds up with the domestic and local shares. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin’s pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

2 Fact 2 — Foreign multinationals specialize in complex products, domestic ones in primary goods

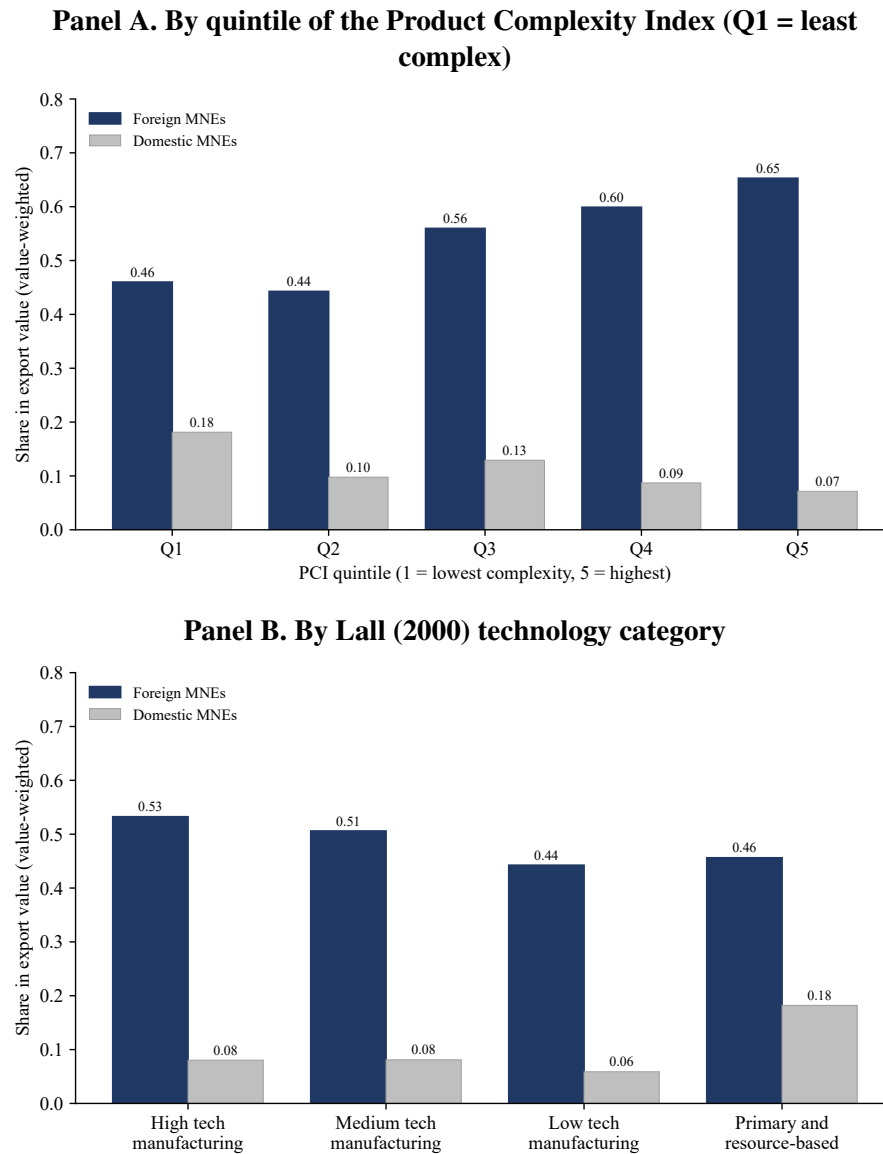

Figure 6: [Main text] MNE share of export value by product sophistication: foreign and domestic multinationals.

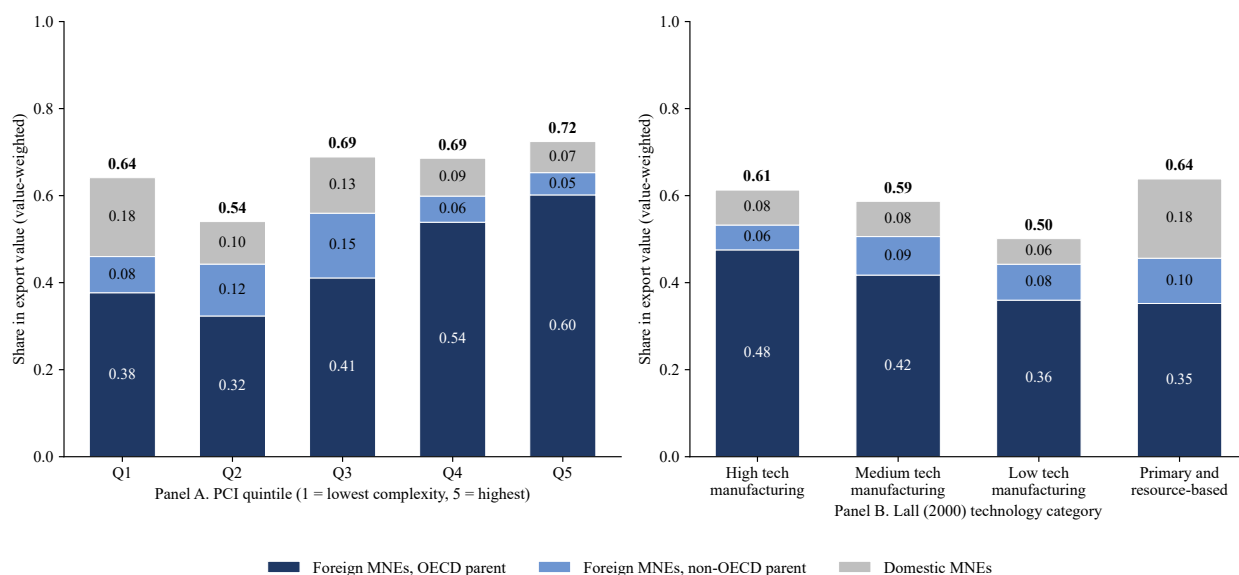

Figure 7: [Main text] MNE share by PCI quintile (Panel A) and Lall category (Panel B), foreign bar split into OECD-parent and non-OECD-parent multinationals.

Note: OECD = the 38 member countries; matched firms with no recorded parent country are counted with the non-OECD parents.

Table 5: [Main text] MNE shares by Rauch (1999) class: differentiated, reference-priced, homogeneous

Rauch (1999) class	Foreign	Domestic	MNE total	N HS6	Value (\$bn/yr)
Differentiated	0.563	0.058	0.621	2,712	44.3
Reference-priced	0.549	0.082	0.631	1,636	63.7
Homogeneous (exchange)	0.343	0.228	0.571	319	97.6

Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

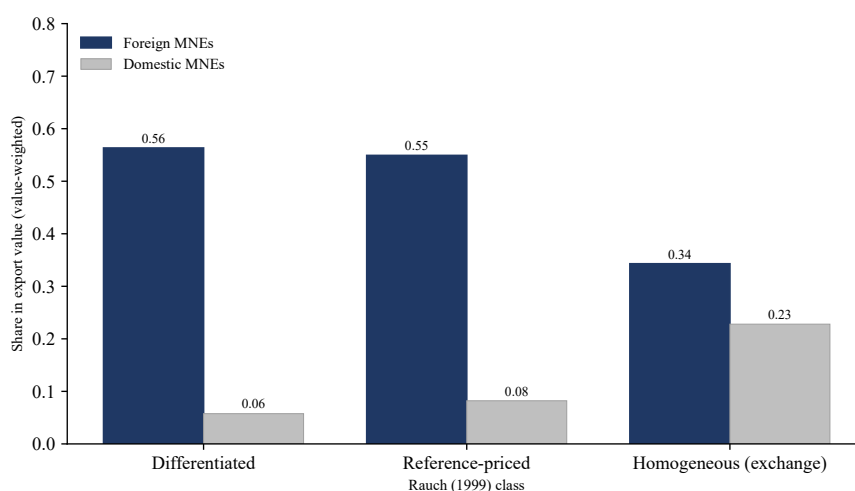

Figure 8: [Main text] Foreign vs domestic MNE shares of export value by Rauch (1999) class: differentiated, reference-priced, homogeneous.

Table 6: [Main text] MNE shares by BEC end use: intermediate, consumption and capital goods

BEC end use	Foreign	Domestic	MNE total	N HS6	Value (\$bn/yr)
Intermediate	0.476	0.155	0.631	3,090	155.0
Consumption	0.438	0.082	0.520	1,201	46.1
Capital	0.647	0.056	0.703	659	9.3

BEC Rev. 4 end use in three classes: intermediate = industrial supplies, fuels (incl. motor spirit and goods n.e.s., which are fuels in these data), parts and food for industry; consumption = food for households, passenger cars and consumer goods; capital = capital goods and industrial transport equipment. HS6 lines without a BEC correspondence are excluded. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Table 7: [Main text] Product sophistication and MNE shares: PCI, Lall categories and Rauch classes, each in a separate regression (one observation = origin $\times$ destination $\times$ HS6 product $\times$ year)

	PCI		Lall		Rauch	
	(1)	(2)	(3)	(4)	(5)	(6)
<i>Panel A: MNE_{total} share</i>						
Complexity (PCI)	-0.0004 (0.0050)	0.0052 (0.0045)				
Lall: high tech (vs primary and resource-based)			-0.0288** (0.0142)	-0.0347** (0.0142)		
Lall: medium tech			-0.0256*** (0.0081)	-0.0111 (0.0074)		
Lall: low tech			-0.0801*** (0.0165)	-0.0797*** (0.0171)		
Rauch: differentiated (vs homogeneous)					0.0819*** (0.0112)	0.0880*** (0.0104)
Rauch: reference-priced					0.1038*** (0.0103)	0.1132*** (0.0104)
Observations	1,671,802	1,670,186	1,788,929	1,787,370	1,667,472	1,665,924
<i>Panel B: MNE_{ext} share</i>						
Complexity (PCI)	0.0385*** (0.0052)	0.0280*** (0.0050)

Lall: medium tech			0.0400*** (0.0080)	0.0517*** (0.0071)		
Lall: low tech			-0.0000 (0.0118)	-0.0050 (0.0087)		
Rauch: differentiated (vs homogeneous)					0.2088*** (0.0082)	0.1914*** (0.0079)
Rauch: reference-priced					0.1783*** (0.0099)	0.1659*** (0.0099)
Observations	1,671,802	1,670,186	1,788,929	1,787,370	1,667,472	1,665,924
<i>Panel C: MNE_{dom} share</i>						
Complexity (PCI)	-0.0389*** (0.0058)	-0.0227*** (0.0045)				
Lall: high tech (vs primary and resource-based)			-0.0618*** (0.0143)	-0.0487*** (0.0137)		
Lall: medium tech			-0.0657*** (0.0087)	-0.0628*** (0.0075)		
Lall: low tech			-0.0801*** (0.0148)	-0.0747*** (0.0155)		
Rauch: differentiated (vs homogeneous)					-0.1270*** (0.0101)	-0.1034*** (0.0084)
Rauch: reference-priced					-0.0745*** (0.0086)	-0.0527*** (0.0075)
Observations	1,671,802	1,670,186	1,788,929	1,787,370	1,667,472	1,665,924
Origin $\times$ year and destination $\times$ year FE	✓		✓		✓	
Origin $\times$ dest. $\times$ year FE		✓		✓		✓

One observation = origin *imes* destination *imes* HS6 product *imes* year; dep. var. MNE share of the export value of the product from the origin to the destination in the year; each measure entered in its own regression; weighted by that export value; robust (HC1) SE. PCI = Hausmann–Hidalgo Product Complexity Index (continuous); Lall (2000) in the four categories of Figure 3, base = primary and resource-based; Rauch (1999) in three classes, base = homogeneous (exchange-traded). Cells whose HS6 line lacks the measure are dropped from that column. *** p<0.01, ** p<0.05, * p<0.1

2.1 Within manufacturing

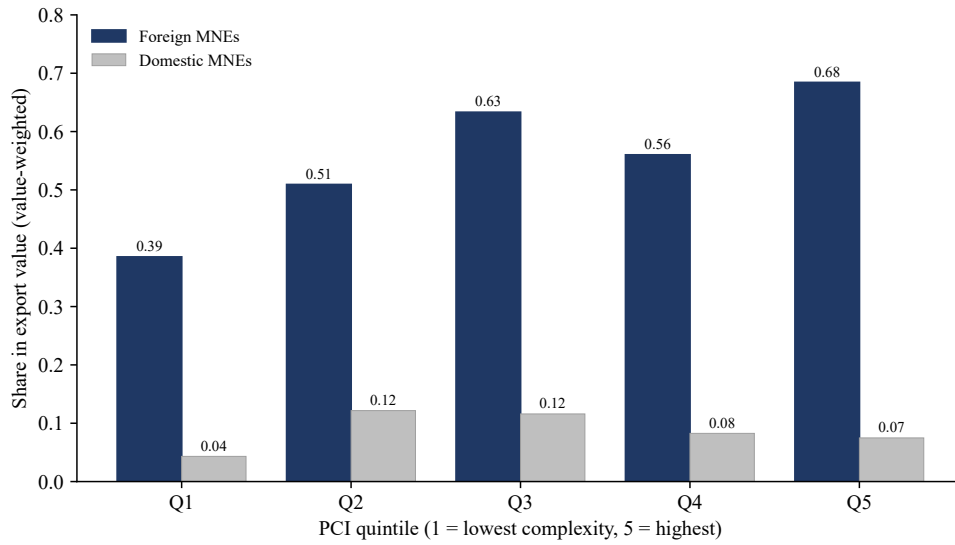

Figure 9: [Appendix] Manufacturing: MNE share of export value by PCI quintile (quintiles over manufacturing HS6 products).

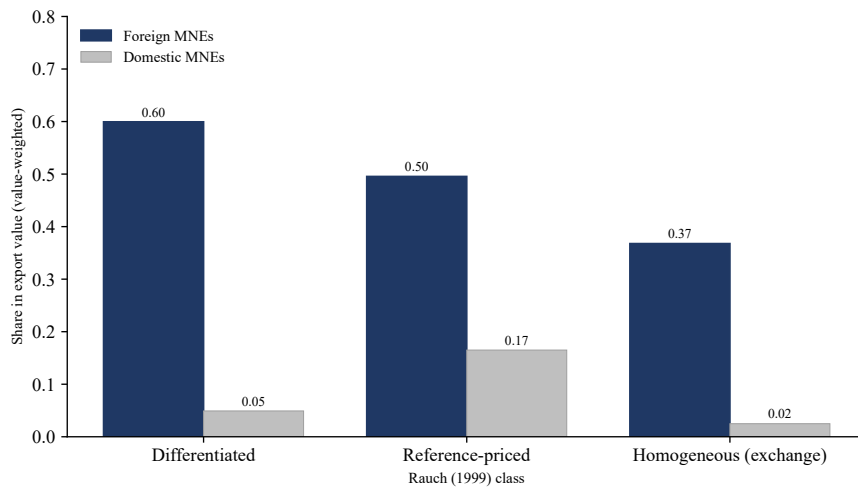

Figure 10: [Main text] Manufacturing: foreign vs domestic MNE shares by Rauch (1999) class: differentiated, reference-priced, homogeneous.

3 Fact 3 — Multinational corporations from a small set of countries dominate exports

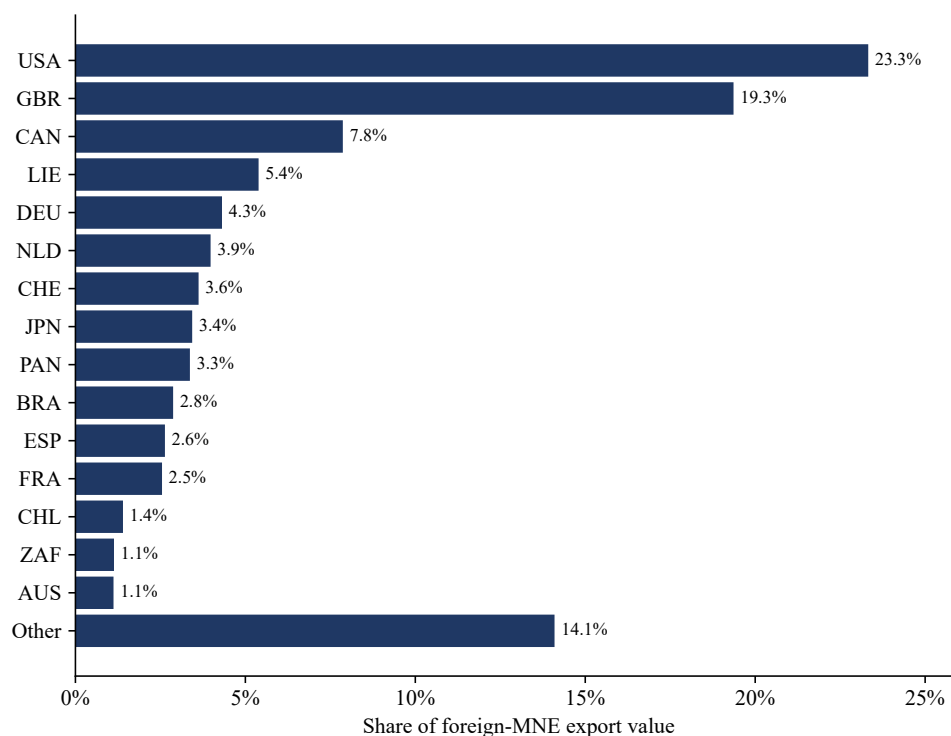

Figure 11: [Main text] Foreign-MNE export value by the parent's country: top 15 and other (Figure 4 of the July note).

Note: Share of all foreign-MNE export value. Foreign MNEs export 46.3 % of total exports (Figure 1), so the USA's 23.3 % of foreign-MNE value is $0.233 \times 46.3 = 10.8\%$ of total exports, the US-parent share reported in the US three-share exhibit.

Table 8: [Main text] Top-10 parents $\times$ top-10 destinations: destination mix of each parent's exports (row %)

Parent / Destination	CHN	USA	BRA	JPN	ESP	CHL	KOR	CAN	NLD	ARG	Other destinations	Total
USA	10.1	22.3	7.8	3.8	4.0	2.9	2.1	0.5	3.5	4.9	38.2	100.0
GBR	36.5	5.6	3.9	7.1	3.0	3.4	6.5	3.3	3.2	0.2	27.3	100.0
CAN	12.8	6.6	4.2	5.3	3.1	0.5	1.9	19.5	0.9	0.2	45.0	100.0
LIE	24.9	3.7	3.7	18.7	3.5	2.5	5.4	0.0	1.8	0.0	35.6	100.0

NLD	9.2	3.8	26.9	0.4	1.0	3.6	1.1	0.2	2.2	3.1	48.4	100.0
CHE	6.2	5.0	6.8	0.5	2.9	3.5	0.8	0.4	2.0	0.5	71.4	100.0
JPN	2.4	8.7	45.0	8.9	0.4	1.4	0.4	0.5	0.9	1.9	29.5	100.0
PAN	35.0	9.5	1.2	1.8	1.7	1.1	6.2	0.6	2.0	0.2	40.7	100.0
BRA	12.9	14.1	18.6	1.6	0.6	3.1	0.6	0.6	2.1	2.3	43.4	100.0
Other parents	9.5	19.5	11.7	2.2	3.7	4.0	1.6	1.6	2.1	3.7	40.3	100.0

Row percentages: destination mix of each row group. Foreign MNEs with a recorded parent country; top 10 parents and top 10 destinations by foreign-MNE export value. Pooled 2006–2022, nine LAC origins (Ecuador excluded), all destinations. Parent = country of the multinational's ultimate parent as recorded (Orbis/D&B).

Table 9: [Main text] Top-10 parents $\times$ the same ten countries as destinations (row %): the diagonal is the share of each parent’s exports shipped to the parent’s own country (USA 22.3 %)

Parent / Destination	USA	GBR	CAN	LIE	DEU	NLD	CHE	JPN	PAN	BRA	Other destinations	Total
USA	22.3	1.0	0.5	0.0	0.6	3.5	1.7	3.8	2.7	7.8	56.2	100.0
GBR	5.6	0.6	3.3	0.0	3.6	3.2	0.6	7.1	0.2	3.9	71.8	100.0
CAN	6.6	2.6	19.5	0.0	3.5	0.9	12.9	5.3	2.6	4.2	41.8	100.0
LIE	3.7	0.4	0.0	0.0	0.9	1.8	0.2	18.7	0.1	3.7	70.5	100.0
DEU	14.8	0.3	1.1	0.0	8.3	1.0	0.0	1.1	0.8	31.9	40.6	100.0
NLD	3.8	0.5	0.2	0.0	0.4	2.2	0.0	0.4	0.4	26.9	65.2	100.0
CHE	5.0	1.0	0.4	0.0	0.7	2.0	0.3	0.5	1.7	6.8	81.6	100.0
JPN	8.7	0.3	0.5	0.0	0.2	0.9	0.0	8.9	1.0	45.0	34.5	100.0
PAN	9.5	0.8	0.6	0.0	1.7	2.0	0.2	1.8	1.4	1.2	80.7	100.0
BRA	14.1	0.5	0.6	0.0	2.3	2.1	2.2	1.6	0.6	18.6	57.4	100.0
Other parents	19.5	0.9	1.6	0.0	2.2	2.1	1.2	2.2	1.7	11.7	56.8	100.0

Row percentages: destination mix of each parent’s exports, with the ten parent countries themselves as the destination columns, so the diagonal is the share shipped to the parent’s own country. Foreign MNEs with a recorded parent country; top 10 parents by foreign-MNE export value. Pooled 2006–2022, nine LAC origins (Ecuador excluded), all destinations. Parent = country of the multinational’s ultimate parent as recorded (Orbis/D&B).

Table 10: [Appendix] Parent region $\times$ destination region: destination mix of each group (row %)

Parent region / Destination region	Latin America	North America	Europe	Asia	Africa	Oceania	Rest of World	Total
Latin America	40.4	15.5	14.7	27.2	1.2	0.7	0.3	100.0
North America	31.3	23.6	20.0	23.1	1.7	0.1	0.1	100.0
Europe	28.0	11.7	17.8	38.4	2.9	1.0	0.1	100.0
Asia	51.0	18.7	11.7	17.0	1.1	0.2	0.3	100.0
Africa	10.9	6.6	26.9	53.2	2.2	0.0	0.2	100.0
Oceania	20.1	5.7	8.4	65.5	0.1	0.2	0.0	100.0
Rest of World	32.6	25.0	20.9	14.3	0.0	7.1	0.0	100.0
Domestic MNEs	25.9	32.9	11.1	27.0	2.3	0.5	0.3	100.0
Local firms (unmatched)	27.1	21.6	21.7	25.7	2.9	0.6	0.4	100.0

Row percentages: destination mix of each row group. Pooled 2006–2022, nine LAC origins (Ecuador excluded), all destinations. Parent = country of the multinational’s ultimate parent as recorded (Orbis/D&B). Rows for domestic MNEs and local exporters are given for comparison.

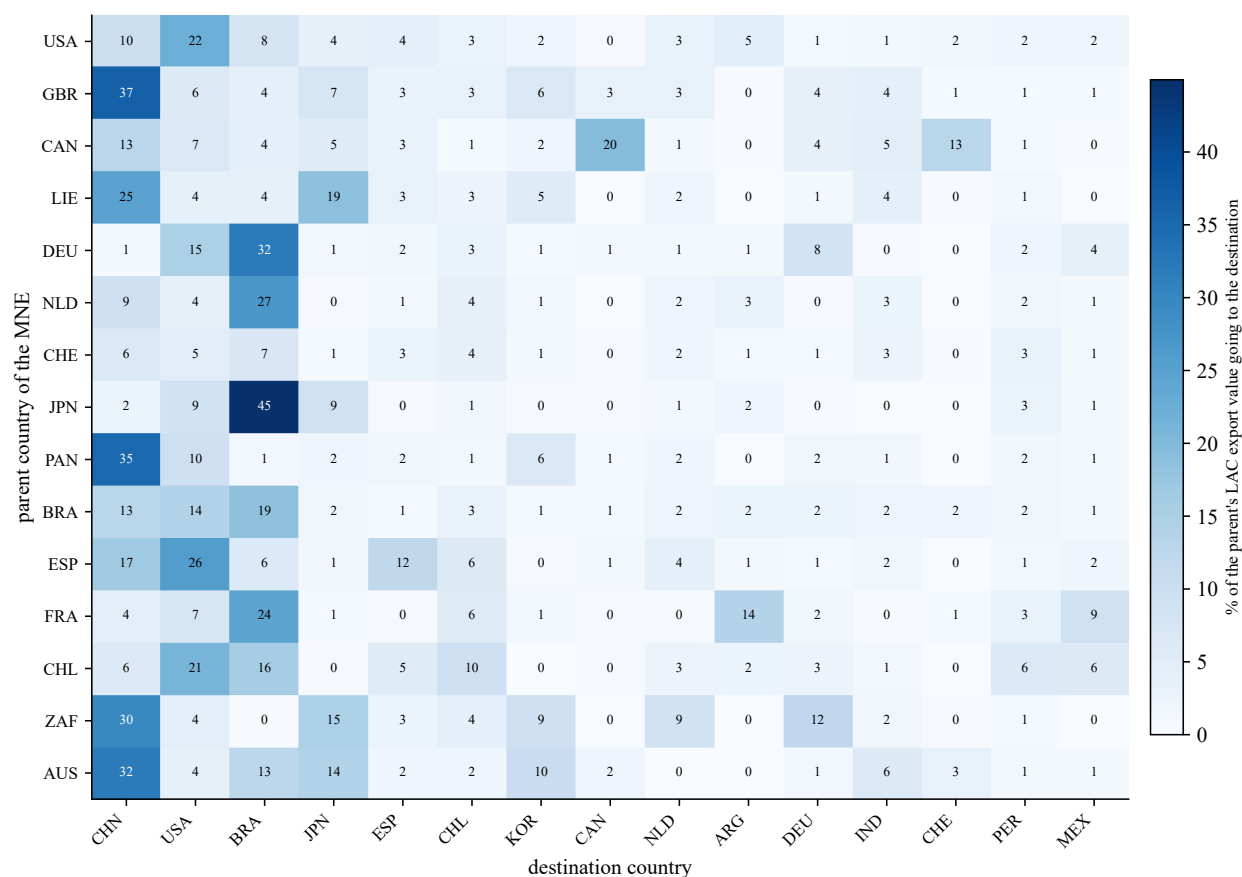

Figure 12: [Appendix] Top-15 parents × top-15 destinations: % of the parent's export value going to each destination.

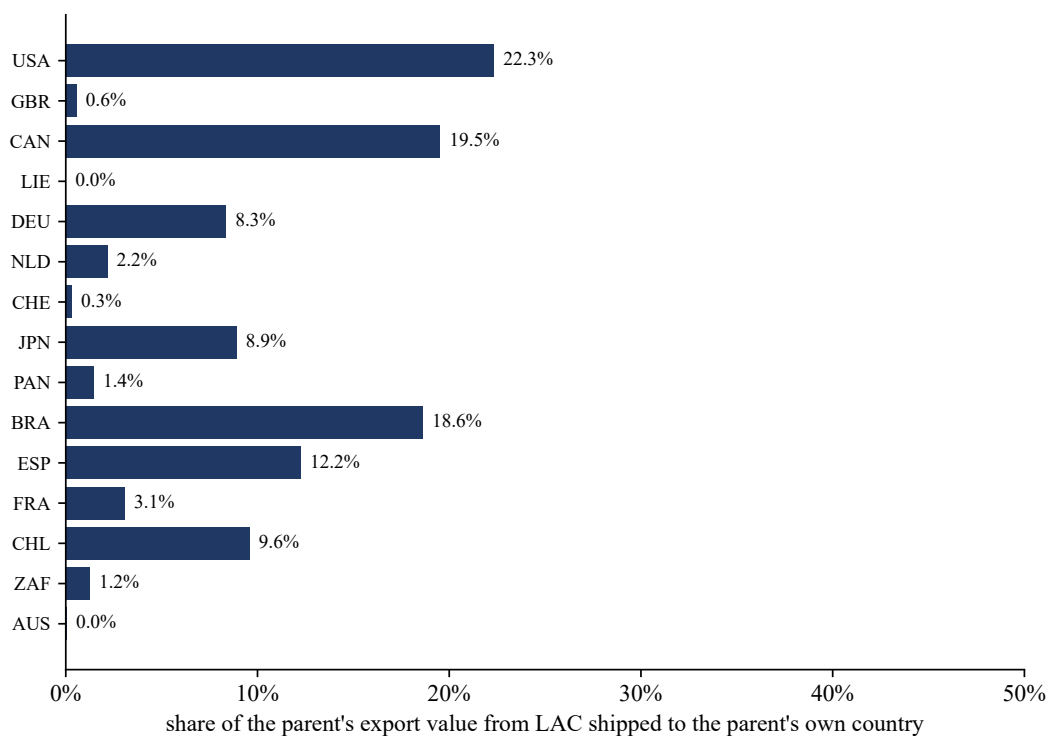

Figure 13: [Appendix] Share of each parent's export value shipped to the parent's own country, parents as recorded (the diagonal of the previous tables).

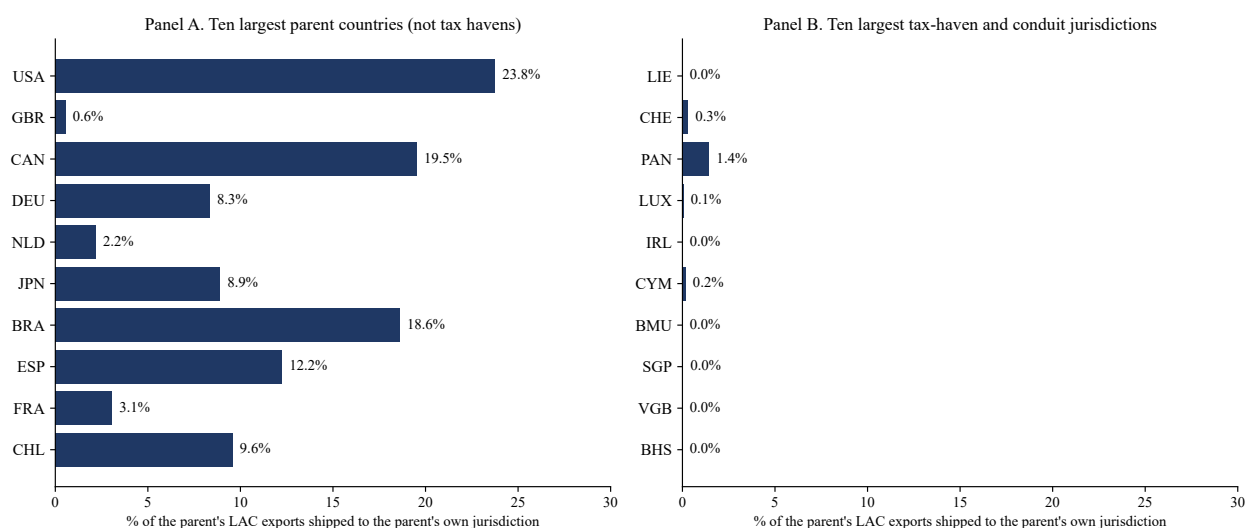

Figure 14: [Appendix] Share of each parent's export value shipped to the parent's own jurisdiction: Panel A, the ten largest parent countries that are not tax havens (dependencies folded into their sovereign); Panel B, the ten largest tax-haven and conduit jurisdictions.

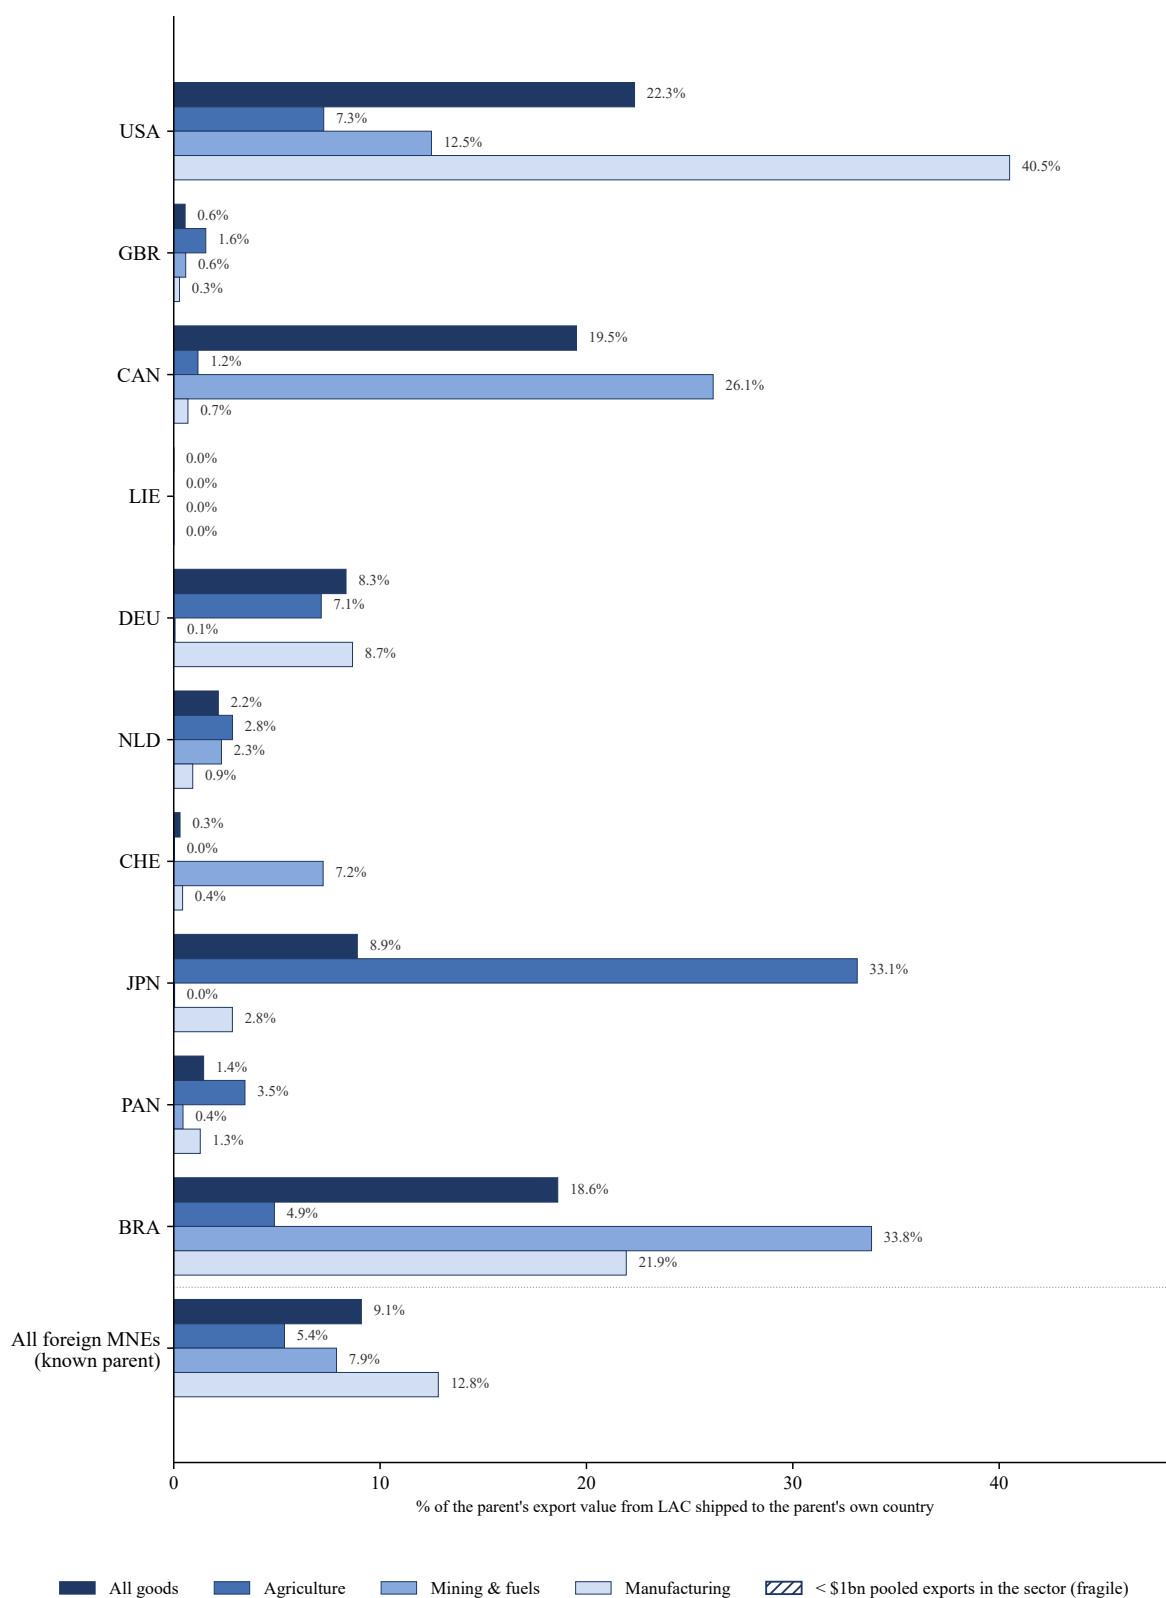

Figure 15: [Appendix] Share of each parent's export value shipped to the parent's own country: all goods and the three sectors, top-10 parents.

Note: The all-goods bars are the diagonal of the parent $\times$ destination table above (USA 22.3 %). Hatched bars: the parent's pooled exports in the sector are below \$1bn, so the share is fragile.

3.1 The United States

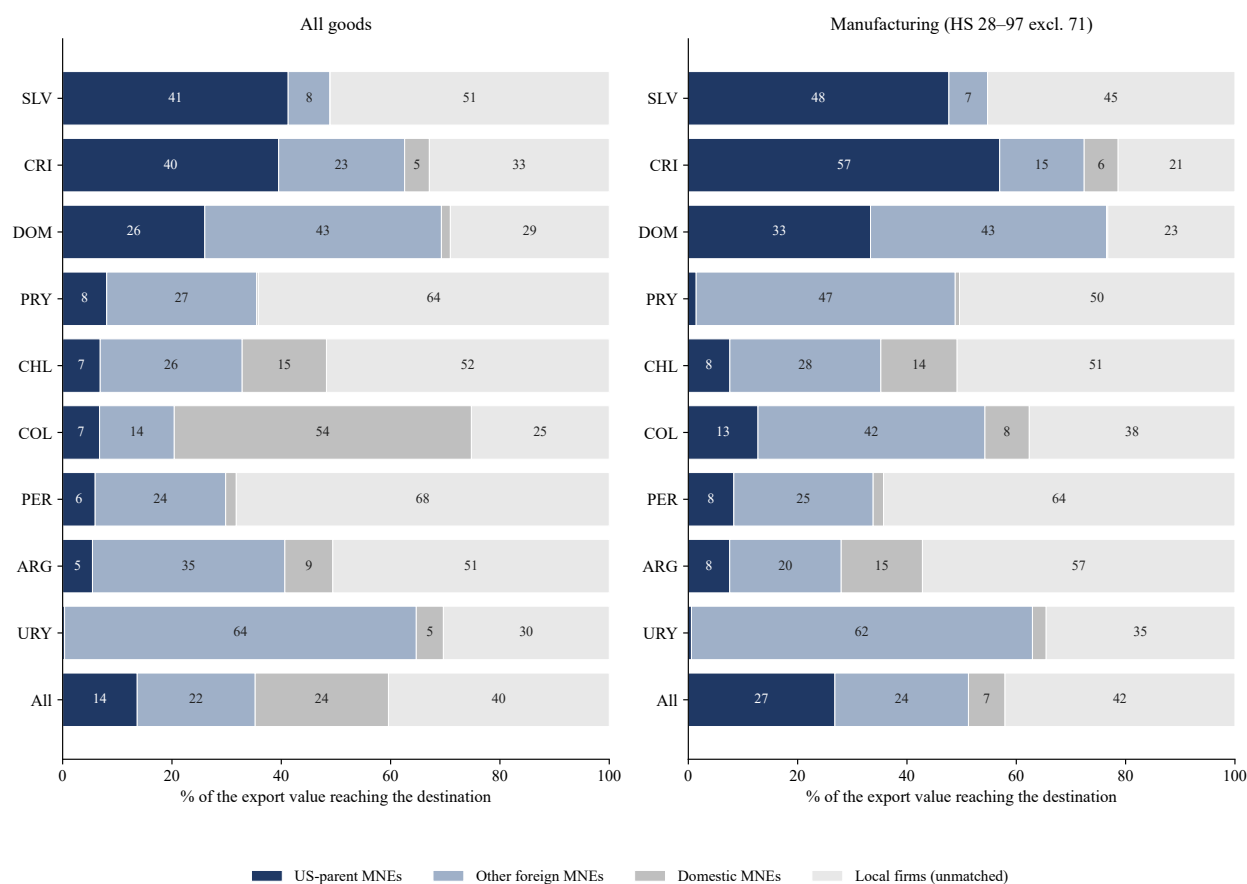

Figure 16: [Appendix] Exports to the United States by origin: share moved by US-parent MNEs, other foreign MNEs, domestic MNEs and local firms — all goods (left) and manufacturing (right).

Note: Denominator: the origin's exports to the United States. The US-parent bars of the left panel are column (4) of the three-share table.

Table 11: [Appendix] Exports to the United States by sector: who carries them (%)

Sector	Exports to the USA (\$bn/yr)	US-parent MNEs (%)	Other foreign MNEs (%)	Domestic MNEs (%)	Local firms (%)
All goods	40.0	13.6	21.6	24.4	40.4
Agriculture	10.7	4.8	28.0	9.2	58.0
Mining & fuels	14.6	6.6	14.8	52.0	26.6
Manufacturing	14.5	26.8	24.4	6.7	42.1
Rest	0.1	40.0	38.4	4.5	17.1

Exports from the nine origins to the United States by sector, and the share of that value moved by each type of exporter. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

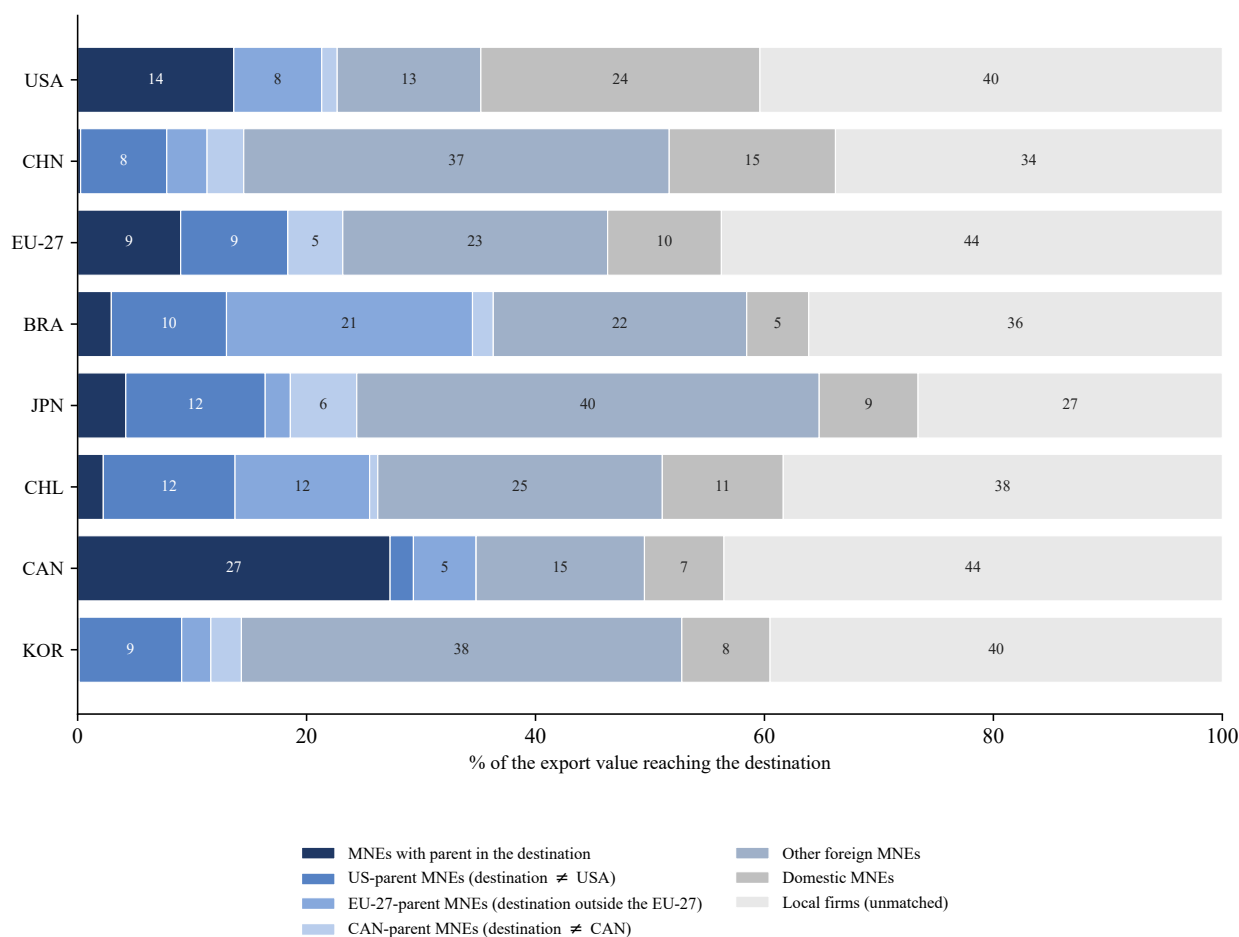

Figure 17: [Main text] The largest destination markets (EU-27 pooled): share of the value reaching each one moved by MNEs with a parent in the destination, by US-, EU-27- and CAN-parent MNEs (when the destination is not their home), other foreign MNEs, domestic MNEs and local firms.

Note: EU-27 = the 27 member states; the United Kingdom is a separate destination and a separate parent country. The USA row's first segment is the all-goods US-parent share of exports to the United States, column (4) of the three-share table.

4 Fact 4 — A small set of large multinational groups accounts for the bulk of exports

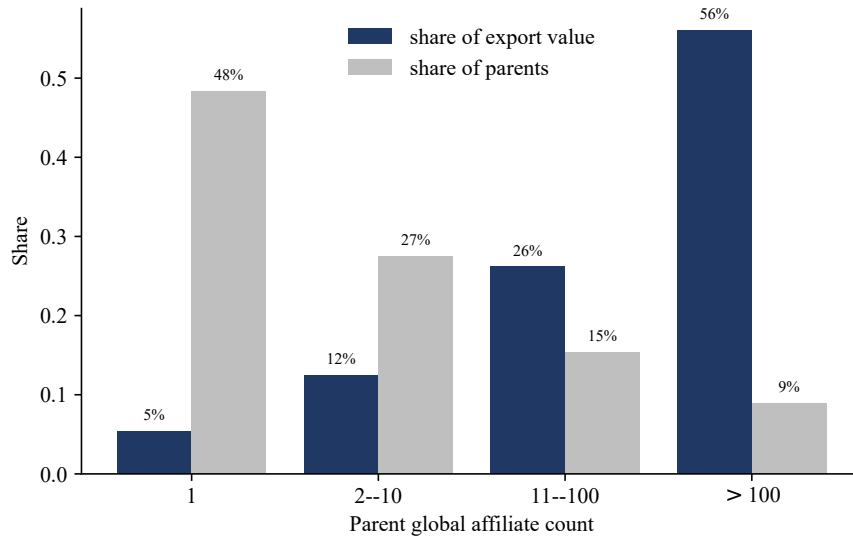

Figure 18: [Main text] Foreign-MNE export value and number of parents by size of the group’s global affiliate network.

Table 12: [Appendix] Parents and foreign-MNE export value by global affiliate-network size

Global affiliate count	Parents	Share of parents (%)	Share of foreign-MNE export value (%)
1	5,982	48.4	5.4
2–10	3,397	27.5	12.4
11–100	1,893	15.3	26.2
>100	1,099	8.9	56.0
All parents with a network record	12,371	100	100

Foreign-MNE parents (parent name key) exporting from the nine origins; 98% of parents and 97% of foreign-MNE export value have a matched global-network record (Orbis $\cup$ D&B roster, src/16). Network size = number of distinct worldwide affiliates.

5 Fact 5 — Greater multinational presence is associated with higher trade volumes

Table 13: [Main text] Multinational presence and trade volume: intensive and extensive margins

	Intensive: ln(# MNE firms)			Extensive: any MNE present		
	(1)	(2)	(3)	(1)	(2)	(3)

Fact 6 in one table: the distance elasticity of firm exports and its attenuation for foreign and for domestic multinationals (columns (1) and (2) of the full table in each scope), all goods and within each sector. Firm × origin × destination × product × year; non-MNE flows are the omitted base, so the interaction is the difference from the base elasticity. SE clustered at origin-destination in parentheses. *** p<0.01, ** p<0.05, * p<0.1

7 Products

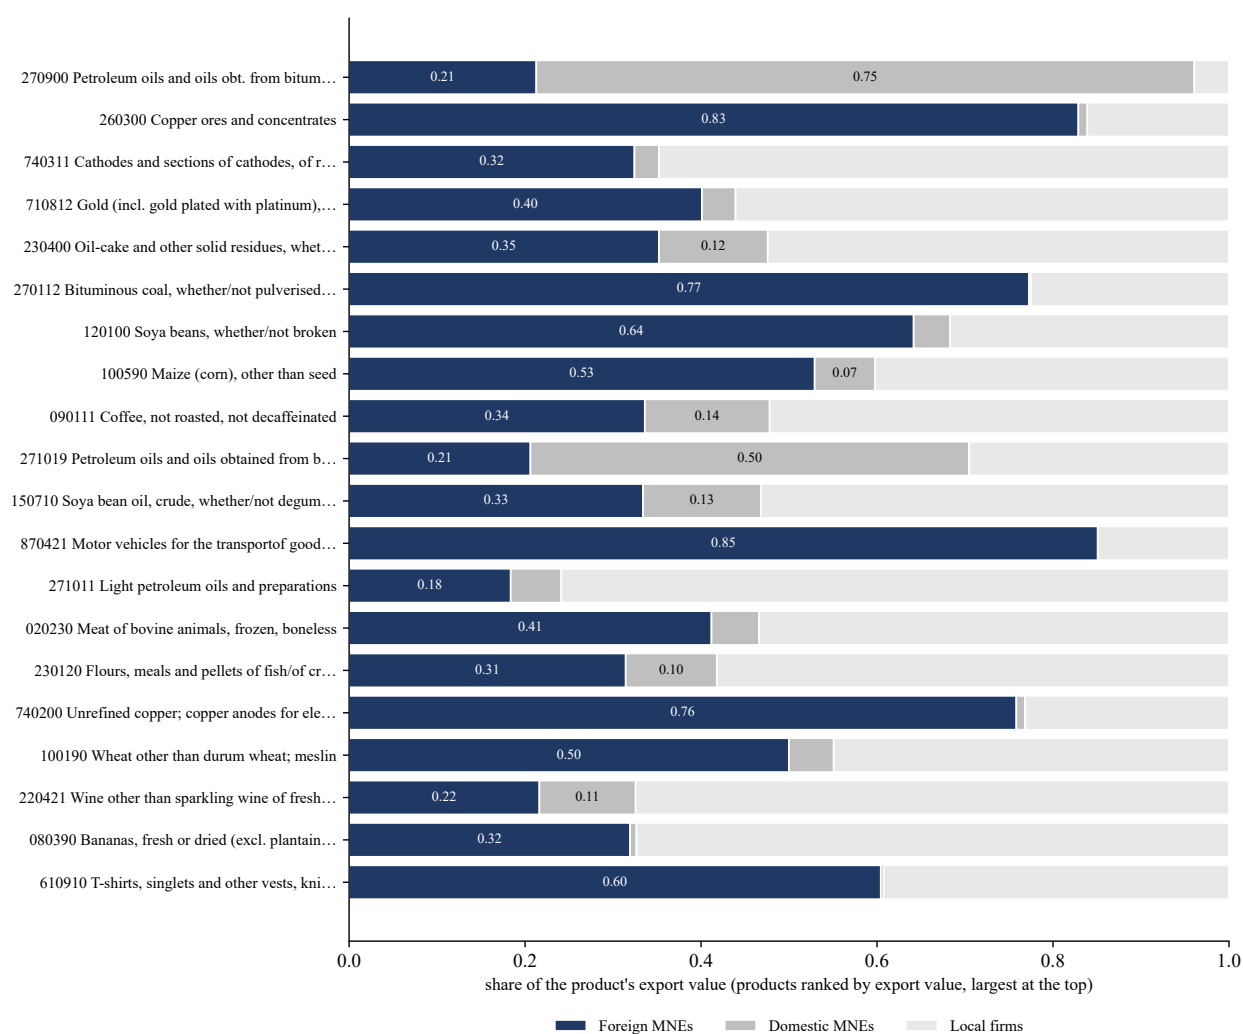

Figure 19: [Main text] Top-20 HS6 products by export value: foreign MNE, domestic MNE and local shares.

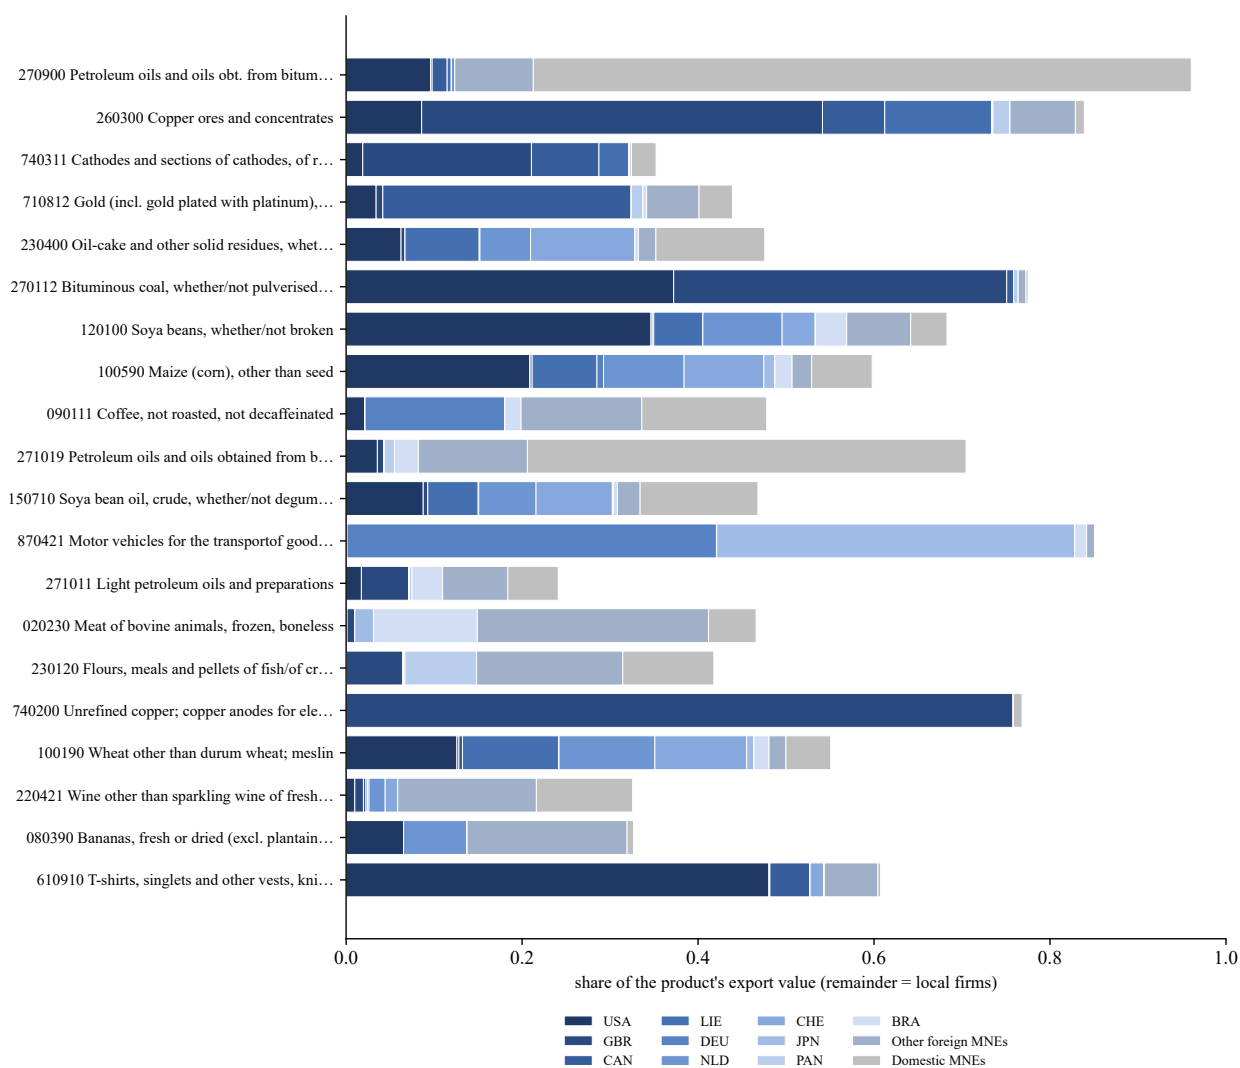

Figure 20: [Main text] Top-20 HS6 products: foreign bar split by the parent's country (remainder = local firms).

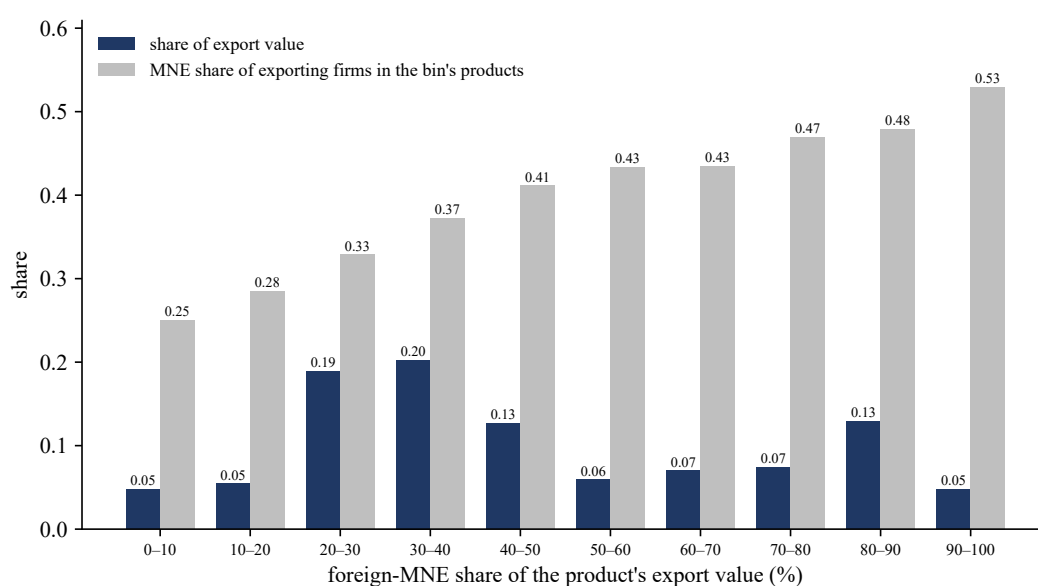

Figure 21: [Appendix] Distribution of the HS6 foreign-MNE share: share of export value and MNE share of exporting firms, by bin.

Table 22: [Appendix] Numbers behind the previous figure

Foreign share bin (%)	Share of value	MNE share of exporting firms	N HS6
0–10	0.048	0.250	1,426
10–20	0.054	0.285	731
20–30	0.189	0.329	652
30–40	0.202	0.372	591
40–50	0.127	0.411	519
50–60	0.059	0.433	442
60–70	0.070	0.435	386
70–80	0.074	0.470	311
80–90	0.129	0.479	311
90–100	0.048	0.530	560

MNE share of exporting firms = matched firm-cells (firm x destination x HS6 x year) over all firm-cells in the bin's products.

HS sections ranked by export value. For./Dom./Local = foreign-MNE, domestic-MNE and local-firm shares of the section's export value, percent; Lead parent = largest parent country among the section's foreign MNEs and its share of the section's foreign-MNE value. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.

Top 15 HS6 lines by the value US-parent multinationals export from the nine origins to the United States. Column 5 = of what US-parent MNEs export of the line from LAC (all destinations), the share shipped to the USA; column 7 = of what all firms in the nine origins export of the line to the USA, the share moved by US-parent MNEs; last column = the three origins with the largest US-parent shipments of the line to the USA and their share of those shipments. Dollar columns: recorded US parents only. Foreign MNEs whose parent country is not recorded (7.5% of foreign-MNE export value) are allocated to parent countries in proportion to the recorded parents of the same group, so every share by parent country refers to all foreign MNEs and adds up with the domestic and local shares. Pooled 2006–2022, nine LAC origins (Ecuador excluded), value-weighted. US-parent MNE = matched exporter whose recorded ultimate parent is in the United States; other foreign MNE = every other matched exporter with a parent abroad or with no recorded parent; domestic MNE = parent in the exporting country; local = unmatched. Dollar values are annual averages: each origin's pooled value divided by the number of years it is observed (ARG 2011–2019, CHL 2009–2022, COL 2010–2021, CRI 2010–2019, DOM 2012–2019, PER 2010–2019, PRY 2012–2020, SLV 2006–2018, URY 2010–2019); shares are computed on the pooled values.
